General positions.

InstaForex Companies Group (hereinafter referred to as Company) and an individual or entity that signed the present Agreement and filled in the Registration Form (hereinafter referred to as Client), together referred to as Parties, entered into the present Agreement (hereinafter referred to as Agreement).

The present agreement designates terms under which the "Company" will provide services to the "Client to operate on financial markets.

1. Terms and conditions.

"Account history" - a list of complete transactions and non-trading operations of live accounts.

"Active account" - trading account of a Client at which the number of executed market orders (1 market lot = 10 InstaForex lots) for reporting period exceeds 0.2% of average balance for the reporting period, i.e. for each 1000.00 USD of the balance 2 market lots (20 InstaForex lots) should be traded. Upon the existence of counter positions at a trading account, only a half of locked volume will be taken into consideration of traded lot.

"Adviser" - a kind of trading account management algorithm in the form of a program based on MetaQuotes Language 4. This program sends requests and orders to a server using the Client terminal.

"Arbitrage" - sales strategy which uses "Arbitrage transactions".

"Arbitrage transaction" - a kind of operation when an asset is being bought on one market and at the same moment an analogue asset is being sold on another market. This stock cost difference is recorded on different exchange markets. It is easy to see that the cost of the package stays pretty much the same, regardless of market movements (because opposite trade agreements compensate each other). Later on, when the difference changes over to the other side, the opposite arbitrage transaction takes place, recording profit. An arbitrage transaction is also a transaction that has just one side of buying, without further analogue selling on a different market.
