

Hi Gibril,

Really nice trading very impressive.

I just don't get the 15m trades, I stated earlier I understand

Momentum/Correction/PA and Continuation of Trend

The 15m trades don't follow that pattern most of the trades you have taken today where at or near to the bottom of their correction phase with no obvious PA to continue the trend.

I guess it's the way I've trained my eyes to see things, I think I'll have to stick to the 5m TF and keep my eye i

NEWBIES CORNER ONLY

Master Arjun Sir,

with much respect please let us Newbies have a little bit more learning time for Basic Set Up.

We are now progressing into Second Stage..... but still majority of our trades are from Basic Set Up on 15M TF.

If you moved this thread too fast..... we the poor and slow learner Newbies, may not be able to catch up with the speed.

I hope you will consider my appeal.

Attached.....15M Tf EU for Newbies Basic Set Up Trade & CT today.

If you notice, we had only 2 CT set up as this is only beginning lesson and introduction to CT. We are still waiting for our **CT KING** to gives us a helping hand for CT Set Up.

Thank You Sir for letting us Newbie to learn your method, and we promise we will never let you down.

Some made a 6 trades, and some made more than 12 trades. It's a small compares to all the EXPERT and PRO in this thread..... but we will keep up to perform better everyday.

Thank You Sir for teaching us Newbies the most simplest method making pips. I hope you will give some consideration not push this thread to another level, because we Newbie still struggling with our trades. God blessed you and your family abundantly.....

Sincerely

GibRil tHe nEwbien.

What is the BIGGEST obstacle in learning Arjun's Method ?

I have read many people in FF or other forum making the same mistakes again and again.....

None of them came to the realization that not sticking to ONE strategy was the first and biggest problem one had to confront.

Traders had to find or create a strategy that they could understand immediately and stick with. Why must create ? Do you have the ability.....Arjun had laid out in from of you HIS method.....with added LOVE.....Then mastering that strategy and becoming consistent would be the next step in the journey.....

Arjun was doing amazing strategy but.....

many couldn't seem to get a handle on it properly.

Some had great trading days, and some really, really bad ones.

to some..... they had some success with that, but mastery of a strategy enough to create trading consistency eluded from them.....Why is that happening..

With his help and Pat Chiko and Assange, I continued working on my trading and decided that to put a manual to all his teaching and rewrite it to become something so simple a total idiot could sit down and simply "see" a trade and take it.

At times I feel I shouldn't post all the trades that i've taken.....Just few small ones will suffice to Arjun thread.

As days goes by I feel disgusted for myself as if I became like a rooster who likes to hear myself crow at every opportunity about how I am able to pick tops and bottoms and know days in advance which direction the market is going. This is bad.....

But when I look at other members is just like chickens who sit around and wait for the rooster to crow some new trading call.

What shall I do to help them, but at the same time not becoming like rooster..... ?

But I must dowhat I must do to protect Arjun Thread and method.....Simple and Love.

Arjun the person that I know who with good intentions post his system.

I can see very quickly he get people wanting to know what the win percentage is, if they trade it live, how long they have traded it and whether or not there is a freaking EA for it.

It worries me sometimes if then come some moron comes along with a super duper new indicator that will help to "filter out" the bad trades. Of course this moron has never even traded the Arjun original system.

Then within a very short period of time the Arjun Thread may end up with a system that is nothing like the original, 10 times more complicated and not even close to the same results as before.

There are far too many people in Arjun thread waiting for someone else to make them successful. I remember , the visitor was numbered less than 10..... average 7 per day.....Now you have over 100 per day waiting and hoping some Holy Grail to pop out from the PC Monitor they are staring at....lol

Of course if they just listen to roosters crow, at least they can blame someone else other than them self if they fail. Or simply just couldn't understand anything from the word Arjun utter.....for them it is just I wondered, so many traders in the thread seem to be hardwired to overcomplicate simple things, even tho; Arjun himself already makes things to the simplest possible a human can understand ?

And most of traders are hoping to find Arjun's automated system that is fire-and-forget.

But this is NOT it.

With Arjun's method traders will be involved in the trade and need to build experience with good amount of screen time.

So either Demo or live , please DO spend time in front of the charts and see how price reacts at the EMAs and the round numbers. another post to chit chat.....

There are two things I like to trade with Arjun's Method.... is.....

When I see all his items line up pretty well....I will "**let it run**" mentality

If there is speed bump ahead..... i change to a "**grab and run**" mentality

But which is which, when all Arjun items line up nicely ?.....I enjoy spending at least 10 hours a day to study charts and looking at different time frames..... as far as I can go to the left of my screen.

It has taken me 6 months full time (including Saturday & Sunday) and worth of 3 great mentor to get to where I am now.

Arjun is the Master Mentor..... I don't want to name the two

For Newbies came to Arjun thread hoping to see full mechanical system.....When price cross 10ema and above 200ema, they will start LOOKING to buy,,,,,,,,,,,,,

LOOKING FOR WHAT ?,,,,,,,,,,,,,is there anymore EMa missing ? Something to think about

Here what it is

All price moves are retraced, at least to some level.

This point applies to candles, too. If you do a study of candles and price action, you will find that over 95% of candles are retraced against, usually in the next candle or within a few candles.

The reason I bring this up is that I have noticed that some traders are in and out of trades within a candle or two as a trade moves against their entry. (scalping)

If you expect this move, two things are likely:

1. you will not freak out when it happens, and
2. you will start waiting for the retracement before your enter you trade.

The market nearly always will move to rescue a price level that has not been retraced against or squared up.

There is many sets of trading "systems" in the market.....freely available paid or broker IB....But the rules in play, all pretty much going in the same direction as the trend, or a few in counter trend style. The only ones who get truly hurt are the ones who ignore the rules and end up colliding with someone else's strategy. Those "getting hurt" in Forex would be the newbies who provide so much liquidity for everyone else. Learn those basic rules, gain the chart time in trading and you too can make it look easy, fun, musical and like poetry in motion.

You get up in the morning, shower, breakfast, put your office attire, drive your car on the Right or Left side of the road. Stop at junction, red light, slow down on many traffic, speed up on highway.....and you just follow the flow.....until become second nature to you.....

Trading isn't any different, no aspect of life is. There are basic rules, a "flow" to learn to become accustomed to, a rhythm to follow and the result you become one flow with the market!, We are not in control of the markets, We are only in control over our emotions.

Talking about Arjun method.....how I will look at things is like how did I react to the market.

I always assume that the markets want to trend so I give it the benefit of the doubt at the start of each session.

If the markets get into a choppy mood, how long did it take me to react to that change.

I look for ways to detect that change better. I'm trying to get more data in my spreadsheet I can start to look for patterns related to days of the week or specific trading days of a month.

For example there may be a pattern that emerges that shows me the EURJPY gets grumpy on such a such day of the month and won't play nice but GBPJPY is super happy and moves very predictably.

Still need to deepen my study to approve or disprove that statement.

How many rules actually Arjun has put in his Method ?.....

This is what I can think off.

1. What goes up must come down. (Gravity)
2. For every action there is an opposite and equal reaction. (Median Lines)
3. Life follows predictable patterns. (Elliot Waves)
4. It takes a lot of energy for a trend to turn. (Inertia)
5. There is a rise and fall to all Price Action. (Sleep cycles/ Circadian Rhythms)
6. Everything is built on smaller things. (Fractal Science/ Geometry, etc.)

The above is actually LAW of Universe.....Is that what Arjun is teaching us ?

Does Arjun method are the same with any and every other strategy or method out there?.

Not one of them is truly significantly better than another one. (Never tried other Strategies.....but i believe that would be the case)

They are all just visual aids to help you see Price Action, shorten the learning curve in the trading and to help you find that "Rhythm" in the Market flow.

It is the trader who makes the difference, not the strategy

Personally I told Master Arjun, I wanted "more" than the status quo of trading.
I wanted to really Master HIS method and still doing it right now.
So, I traded ONLY the basic system/ indicators of the things he recommend and Asian Session (outside his recommended trading times. ie LO and NYO).
I wanted to train myself to get to a point where neither greed nor fear had any effect on my trading.
Master Arjun knows that I'm not completely "there" yet, but I am very, very close....

Do you want to know how become more or less suceesful with Arjun's method ?..... Real story about me.....lol

I met a Professional Financial Advisor , as I need to keep aside my profit from Forex Trading.
I told him, i made this money in Forex Trading, and started it with almost no money (someone funded me to start with) with no trading experience and made this very good money.
He then asked " how I did it ?"
I told him, **"I was too stupid to know it couldn't be done, so I did it."**

This the truth, because I was thinking trading is just like BUY when it goes up and SELL when it goes down.....lol

He then told me a very wise words.....

It has already been said, **"those who insist something is impossible are always being interrupted by those doing it"**

Most people consider detailing in trading and looking at small things and small posting by Arjun is all of that boring. They want Arjun just tell them...is it BUY or SELL.

To me Arjun posting is a treasure hunt. Finding little nuggets of gold that lead to big mother loads of gold.
The most important things I do to improve my skill with Arjun's method is I run strategy tester in tick by tick mode and just watch price movement like a movie.

Every time a signal shows up I am watching price movement and thinking about what I would do in this situation.....lol is that boring ?

Twice a week with full 6 hours screen tick by tick (many, many pairs)

Many say it's not possible to achieve returns of more than a few percent per month, yet there are many who do much more than a 2% return per day pretty consistently. These sort of returns are possible and **possible consistently.**

It all just takes a bit of time to allow you to gain a "feel" for your trading style.

To be honest, it all comes down to belief.

You either believe you can and start working to accomplish it, or believe you can't and never even try.

The issue is more psychological than practical.

I belong to those who choose to believe something is possible, and usually achieve it.

One of the trade taken today.....

this is special NFP (No fooling please) day.

One New member in the thread couldn't understand the use of 200 and 800 EMA in 15M TF for Arjun method.

He sees no values of those two EMA's.

And today, I found one perfect trading to go in at break of 200 and 800 EMA which combine gives a very powerful signal.

The pair is GBP/CAD given me an average of 65 pips per lot traded.

Not I'm happy to proof him wrong..... Just want to tell him.....

For those of you who choose not to believe, you're right, and you will never make it.

Those who choose to believe it possible, keep at it and eventually achieve "it" whatever "it" is for them.

There is NOTHING impossible unless you believe it is impossible, for you.

My goal, once I enter a trade, is to find a good opportunity to move my stop to break even.

Once I do, I really don't care what the market does.

I know, I cannot control the markets so what the markets do is entirely up to the market.....**I don't focus on being wrong I already know that will happen I just don't know which trade(s).**

Few of my trades went up to 30-40 pips and then have it come all the way back to break even and not take any profit.

This is because I was in school when the trading took place. I'm okay with that.

Nature loves a balance and people instinctively understand that.

As a result traders **"expect"** price to return to the **"median"** or to seek it's "balance" though there is no **"rational"** reason for this other than it being a **self fulfilling prophecy.**

What goes up must come down, everyone knows that!

Inertia keeps moving objects in motion and resists objects at rest from movement. Everyone knows that too!

Life is filled with cycles, which scientists now call “circadian rhythm.”

Night and day, rise and fall of the tides, sleep and waking, excitement and depression. Everyone knows this too!

Fractal technology is the science of how larger things are built on smaller things.

Just look at a tree. One line “branches” into multiple lines and eventually we have the shape we recognize trees to have, both in branches and roots.

The whole point in all this is.....

that life is built on self-fulfilling prophecies and expectancies.

So are the markets..... It really is that simple.

Yet everyone wants to try to make it complex and difficult to understand.

Trading is no more difficult than finding one or more of these that you can understand, “see” clearly on a chart and trade effectively.

That then becomes your "edge."

WHY do WOMEN traders are better than men ?

I always seek Assange advice and wisdom in trade. She know how to give the exact answer easily.

And she even trade better than me.....She trade only 1 hours per trade, 3 days per week, sometimes only 2 days/ week.

That's all she need to make more than I do now.

WHY DO WOMEN TRADES WELL.....?

Start with this.....

Choosing the most likely pairs that will give you potential signal to move.

Originally startedArjun method use 15MPeriod.

Then comes 5M Tf.

Along I introduce 3 time frame method to analyze the system. 4Hr, 1Hr, 15M.....

Am I changing Arjun's original method ?

No.....no.....no.....

I use THREE higher time frame to assist traders to see WHY, the first reason the enter the trade.

It's a back paddle from Arjun's Method.

If you have enough experience.....it's easy to see trade set up on 15M TF. If you're not.....you will not have a single clue why the trade was taken in the first place.

Still lost? In simple terms, you may say that you are going to trade M15 because you know Arjun method on that time frame which is proven to be successful and profitable.

Yet, when you trade that method, you cannot get it to work for you, no matter how hard you try.

The funny things is usually, the harder you try, the more difficult it becomes.

There is nothing wrong with the system, it works, it has been proven by others.

What is wrong is YOU. YOU are not harmonic with that time frame.

YOU have to find a FEW time frame which compliments YOUR harmonics.

Until to the point you really understand how's the HTF works in harmonics with 15M TF, you will never be successful, comfortable or happy.

Excuse me.....

Is this a good set up and PERFECT Entry ?

1. Price Above 200EMA..... Checked.....
2. Price Above 50 EMA.....Checked.....
3. Price Above 10 EMA.....Checked.....
4. Hourly TL.....UPward.....Checked.....
5. Price Above Support line.....Checked.....
6. Swing HL...HH...HL...HH.....Checked... ..
7. Blue Candle.....Checked.....
8. After LO and NYO.....Checked
9. Above BRN or RN.....Checked.....
10. Price Above the Day Open and almost going to break yesterday HIGH.....Checked....

I think Perfect TEN System Checked.....

Perfect to GO for LONG.....

PERFECT SET UP.....

NOW BECOMING

PERFECT DISASTER.....

THE SYSTEM FAILED.....

I WAS RIGHT on my 10/10 analysis.

This method is not suitable for me.....OR.....will continue.....

The System did not failed.....

You failed to be Harmonic with the Market.

Lets begin from the TOP.

You need 2 minutes to look at this and have some ideas.....

what's the market is doing.....See the Forest....

This GPS, so you never get lost

Now let us look at the Jungle
 Detail reveal, there are overhead resistance waiting.
 Yesterday DOJI had given us early warning.....
 Price is still below 10ema.....

How about looking at Trees. overall
 Price is above 10 EMA.....
 does not harmonic with Week and Day.....
 Price hit the overhead resistance yesterday.....
 Doji candle is dancing in between BRN.....

This is where it get a little bit NOISY.....
 Unless you are peaceful and patience personality.....
 You wait....and wait
 Thick Yellow = Strong SR
 Thin Yellow = Immwediate SR lines
 This trend is not harmonic with the week and day.....
 this is **Physiological** game.....and letting Greed to overcome Fear.
 from 60M TF belowthis is where it get tricky....

I think this is where each persons own comes into play .
 I want to know the big picture always so always have a look at 4 hr and daily.
 I need to look at the 15 minute to get a clearer entry.

So this is my plan. I mark key S and D zones on the 4 hour, 60M

When I have those marked I will drop down to the 15 minute and get a clear entry within the zones I have marked.

Wanting to find the correct zones but sometimes I too get confused when different timeframe zones are not within the higher timeframe zones.

So maybe I should ignore those and only look for zones within zones when dropping to the 15M TF.
 I hope I wrote this clearly.
 I think this is where a lot of us get confused, especially me the LOVEBEES

I short btw,
 If you look at Arjun method at first glance you think is the Price/EMA crossing system. Think about it again.....
 It will works for whom make it work, and doesn't works for whom didn't make it.
 To make it work, you have to make yourself able to make it work.
 What makes it doesn't work is the user itself.
 There is no such an absoluteness for a trading system,
 what works for one doesn't guarantee for others, and vice versa.

Consider this before taking trades on EMA crossing.

- 1- Don't trade EMA Cross, when crossing is because of Big Candle. **Expect price retracement.**
- 2- Don't trade EMA Cross when Market is just open.
- 3- Don't trade MA Cross during Major news.
- 4- No S/R at or near point of crossing, in trading direction.

There are 3 ways He use the moving average principle:

- 1: **As a stand-alone system**, example you buy/sell when the price is above/below its 10 and 200 EMA.
- 2: **As an exit tool**, example your long position is profitable but now you want to find a good exit point, so you decide to keep your position open as long as the price does not close below the 50EMA, thus maximizing your profits.
- 3: **As a filter**. This is by far its best use. Example His system (other than a moving average system) issues a BUY signal, but you quickly look at the chart and see that the price is BELOW the 200EMA so you do NOT take the trade.
Traders would be really amazed by the number of losing trades this simple rule/filter eliminates!

What is the MAIN USE of EMA in his system then.....?

Only good for 1 thing.

They tell you the trend.

The most reliable indicator to tell you of the trend.

Simple and elegant. If your MA is crossing over to bull side, your bias is long. If your MA crosses to the bear side, your bias is short.

Note .:

Entries should still rely on support resistance. Blindly following every MA cross signal will put you in a lot of whipsaw and if your money management is not good, you will lose money.

What is the MAIN USE of EMA in his system then.....?

Note .:

Entries should still rely on support resistance. Blindly following every MA cross signal will put you in a lot of whipsaw and if your money management is not good, you will lose money

UP

DOWN

The Basic Structure of the Bullish-Bearish Trends

About SPOT.....it goes like this

WEEKLY SET UP.

What do I look for on weekly basis using Daily & 4 hr Chart ?

I looking for Gravity-SPOT /aka The G-Spot..... (I copy the name from somewhere, but couldn't remember where I read it)

From Daily..... I use lines.....many lines & Channel to see where it meet the 200EMA.

Why looking 200EMA for Daily Chart ?..... I don't know.

Just scroll back your daily Chartsee if you can find G-Spot to lead you for the week to come.....using 200EMA

This was LAST WEEK.....where 200EMA at the right Spot.

I'm trying to locate the Spot for few Pairs ofr this week.....Maybe it appear after NYO of tomorrow.....
Have to be patience.....
Attached Chart.....Daily.....4 Hr.....1Hr.....15M. (for entry)
NOW CAN YOU SPOT IT ?

This appear late Friday. Can you see the SPOT ?

Bouncing between the SR.

On Monday..... Momentum candle kicks in.

After that none of the 4Hr Candle closed below 10EMA.... until NFP

Now as the week begins.....

by end of Trading day on Monday you start plotting new trendline.

Follow the 10EMA on 4hr.....Buy everytime it pull back on 15M.

It went up after NFP.....it went for final push to take up all SL on the left (as it was a double Top on 4Hr..... Many Short order pending there)

It went at exact pip , up to the upperline. (on 4HrTF)

That was Last Week.

I m still using that line today,

After this you will see that line for my entry today on 15M.

I didn't change the line yet.....May be after LC.

Today entry posted earlier was initiated by this SET UP.

I use 15M TF for all my trade entry.

Trade One

Tokyo Session.

Found G Spot mostly in KIWI.

Few reliable.....but the rest in not as powerful

Need to cherry pick the trade using Pivot fib and RN,
EUR/NZD... Easy prey. Text book from late yesterday.

Today entry just formality finding for zero stop loss.
good for 40

Trade TWO

Tokyo Session.

GBP/NZD... The door was opened after NYO closed, late yesterday.

Didn't enter as waiting the Samurai to bring more cash on the table this morning. I m only follow what the Samurai is doing...

good for 50, TP at RN

Trade THREE

Tokyo Session.

NZDCHF... Bouncing from the three EMAs, above Pivot Fib.

Enter only seeing the Samurai start to throw their money on the table.

I am a follower.....take my pips at BRN. exact pip.....

good for 43, TP at R

Trade FOUR

Quick London Session.

London Boy are making live a bit easier.....lol

EURUSD.. Shorted at the Break of 15M TL.....before it goes down below

Pivot Fib

Good RN to RN with +50, TP

Trade FIVE AND SIX

Another Quick London.

EURJPY.....

Trade No. 5.....Was early.....Entry made on the break of Inside TL, but

below 200ema and below RN (**Never do this again.....this is just simply stupid OVER-CONFIDENT....**)

Trade No. 6..... **Proper Entry**, break of outside TL and below Pivot Fib.

USD.. Shorted at the Break of 15M TL.....before it goes down below

Pivot Fib

Good RN to RN with +46 and +53, TP

Break of trendline for EUR pairs.

Trade initiation process

Mostly I am looking for established trends and/or significant levels in the market.

And then I watch closely for their edge to appear, to provide me with “confirmation” that the time is right to risk some money in the trade. (maybe 8-9 pips)

I have to timed and know exactly the edge in the market is, and then execute it with flawless precision and confidence.

I never haphazard second-guessing or over-trading.

This two is how simple it can be.....

I didnt take this trade.

One of the GOOD set up on HTF.

As I only got 2 hand. I cannot trade more that 3 pairs at one time. (max)

Unless when I trade Position or Swing.

Good example in AUDCHF..... go with the flow

New York

Trade 1

EU pull back to 38% fib area. Hit resistance.

800EMA was at 50% fib area. Sould consider SHORT here...

Short was very late when it broke support at RN.1.29250

TP another RN. Total +50

New York

Trade 2

GU very tired pair. It Pull back to resistance area, showing lots of upper wicks.

This is easy Short at 200EMA is far on top.

Shorted at RN 1.60250. Middle of Momentum Bar

TP another RN. But missed by few pips. Have to bailed out when candle reverse. +42

New York

Trade 2

GU very tired pair. It Pull back to resistance area, showing lots of upper wicks.

This is easy Short at 200EMA is far on top.

Shorted at RN 1.60250. Middle of Momentum Bar

TP another RN. But missed by few pips. Have to bailed out when candle reverse. +42

Hi Cristiansan,
 another good example how the trendlines act as containment band.
 EUR is not going anywhere..as long it is **trapped** in between these TL.
 When NY closed. I start to plot these lines to prepare for Tokyo.
 I will choose pairs that shown LEAST resistance for movement (different than S & R),
 I want to see .clear path ahead, so that price can move 20-30 pips.or better still i try to find pairs that likely to move from RN to RN.
 Day Chart.....have a peek for 2 mins.
 4hr Chart.....study for 3 mins.
 then you can narrow down pairs you want to trade using Arjun's method.
 Waiting for 15M TF PA to show directions. Im more keen to see Price want to break the insideline to go higher,,,,lol

Quoting cristiansan

Thank you Gibril!

From what I see and understand from your post, when it comes about **INSIDE/OUTSIDE** trendlines, you draw them on higher TF (let's say D1) and then you go on smaller TF (H4 and M15) to see the PA in between. Please correct me if I'm wrong!

Hi Cristiansan.....

There is no right or wrong.....

How do you think I use these lines to help me trading. ?

Look at Post.#105 (www.forexfactory.com/showthread.php?p=6082822#post6082822) . This is my Position Trading (not intraday)

I saw the trendlines is at the bottom..... Yesterday trade for EUR, I didn't bailed out my 1st Position. In fact I ADD more position when the price complete its Pullback.

The reason was I saw a clear path ahead, until when price reached the trendline area (inside or/and outside)..... That's the limit area for Position Trade. Must TP and work my way to find new trade today. I use fib and RN to find which is the best for my TP. All these are done after London closed yesterday.

Use these trendline to your advantage coz they are your guide for trading.
If you are intraday (15M) they can be useful with Arjun's method. Nut let PA confirmed the move.
I'm waiting for EURO to break to the upside now. (this is not prediction....lol)

I'm trying to see what price is trying to do.
Best in your trading.....

Hi Cristiansan,
sorry for late reply. Was asleep.....
You're right in the down move for EUR/USD & EUR/JPY.
But....the price were rising during NY session until it bounce off the 200ema, and broke down the TL.. Not sure at that time price to break the TL
This is basic set up as per Arjun's Thread. This is why I like to use 15M as you knows very well that m15 is not good for 'forex quick gunners'but I have to be patient for a signal, I believe patience and discipline (and cool mind) are a keys to profits.
Arjun has provide us with these tools, which i believe are killer, but it still it comes down to LOVEBEES knowledge of price action, proper trade management and confidence in the system they're are using.
Both trade are as per rule set.by Arjun...
..... EU +40, EJ + 50. I was targetting the ADR, but prefer to take EU at RN and EJ at 4Hr 200EMA, have to bail uot as it shown a sign of 2 candle reversal,
It may go down further.....but I can live with that small pips for NY closed.
Those lines are used as my guide to trade. The triangle, are in the Pitchfolk to avoid any early entry and whipsaws., because I need some guide to hold me beign early.

All the best

TOKYO Session.

Trade 1.

Mostly set up in AUD pairs..... missed one AUD/JPY

This is GBP/AUD. Price below 200ema. Basic Set Up, Arjun's method.

Pullback during New York Session.

Took first early trade when price dip below 10ema & Pivot. with SL 16 pips

Took 2nd & 3rd trade during Tokyo. SL 14 pips

TP. 1st @ S1.

2nd & 3rd @ BRN.

Average + 50 per piece

TOKYO Session.

Trade 2.

This is AUD/USD. Price below 200ema, but above Pivot by New York closed.

Price range, until break of trendline just before Tokyo giving the Basic Set Up ; Arjun's method.

Entered long 15M after Tokyo, price above 200ema. Single Entry.

SL at 11 pips....Pivot Point.

Split TP.

TP. 1st target @ BRN. (1.02500)

2nd target @ R1 & 800ema

3rd target @ RN. (price pull back deep. but SL already moved to weekly Pivot)

+28, +33, +52
