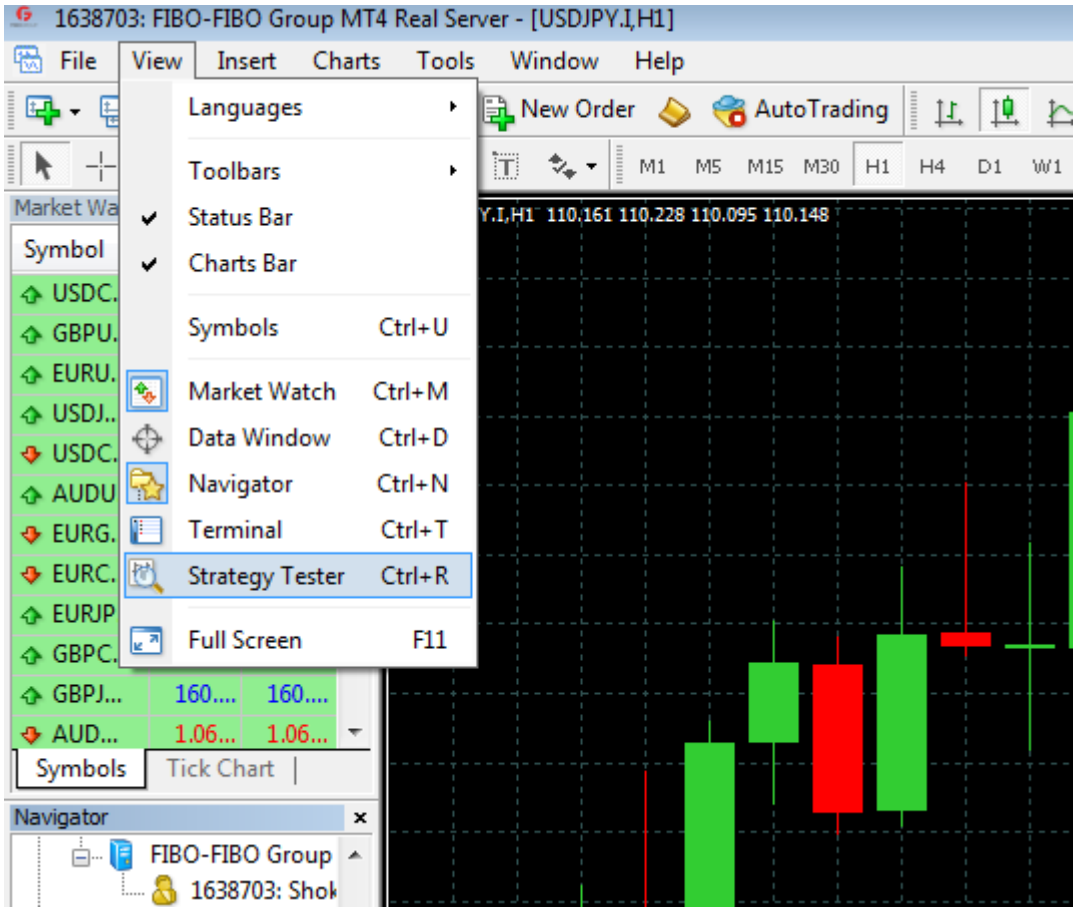
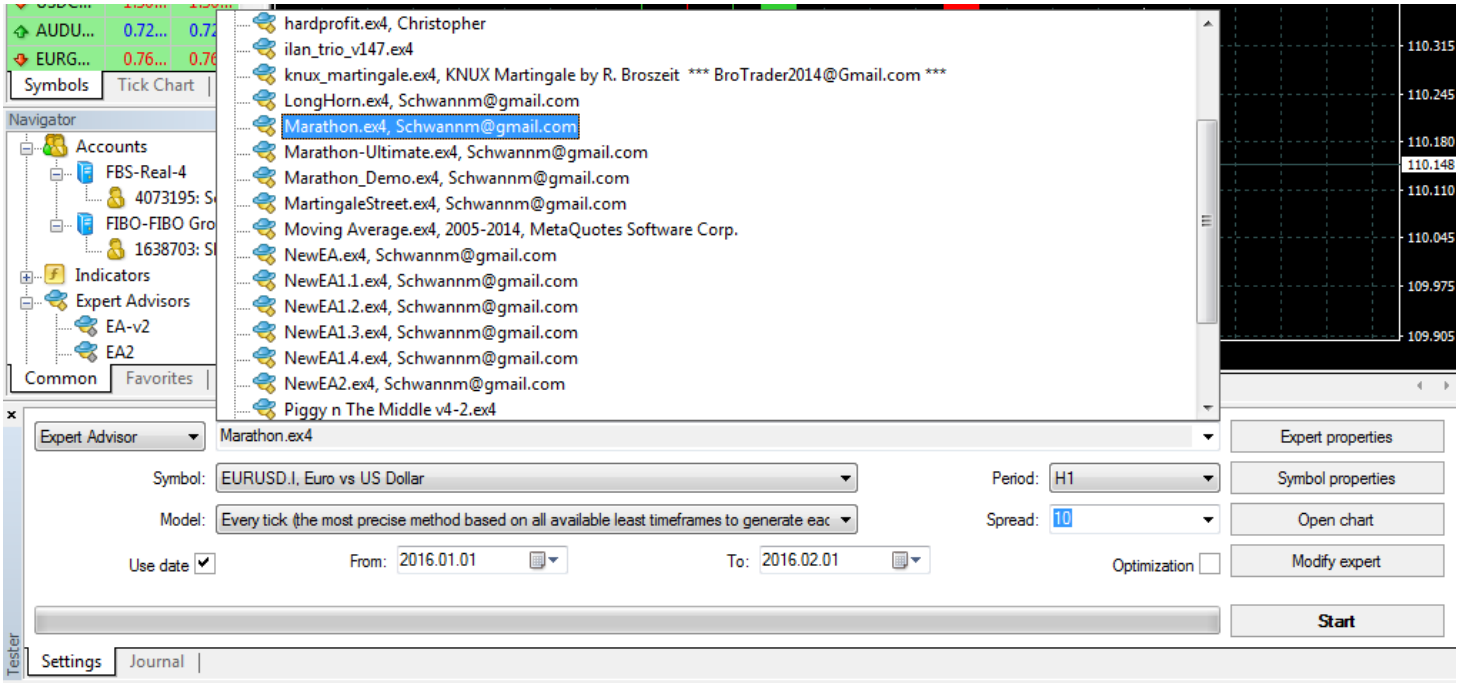
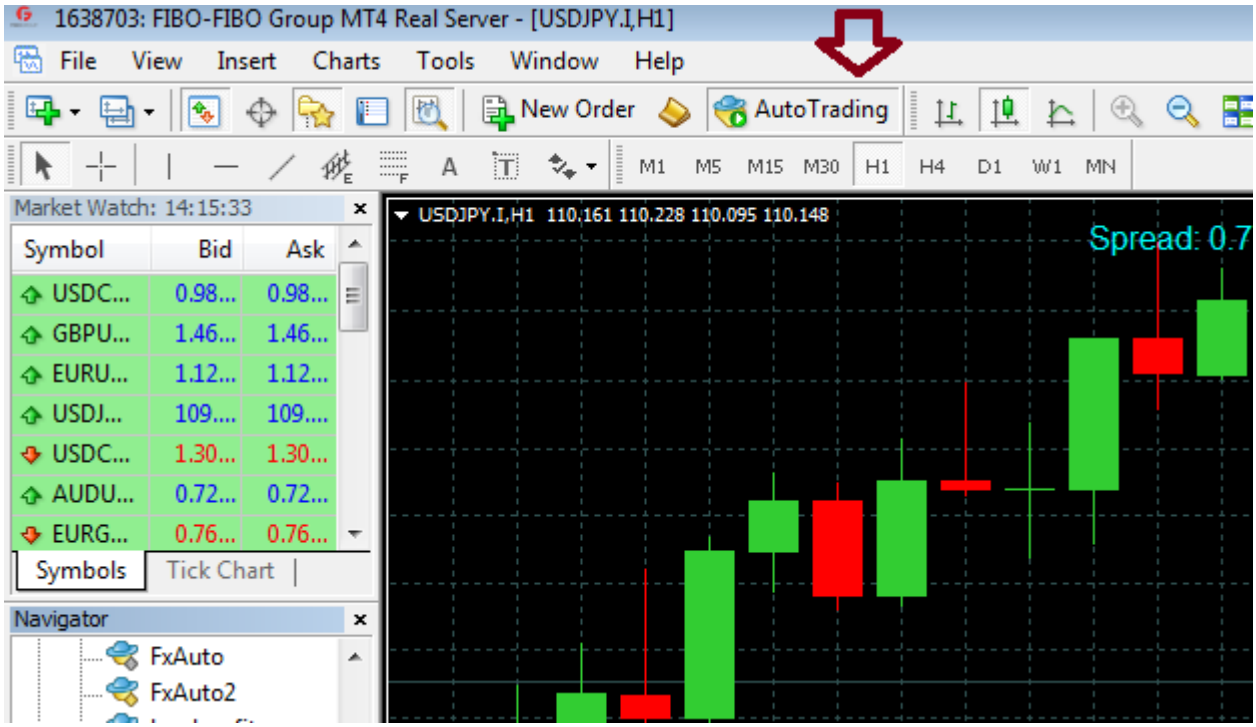
Using The Strategy Tester:



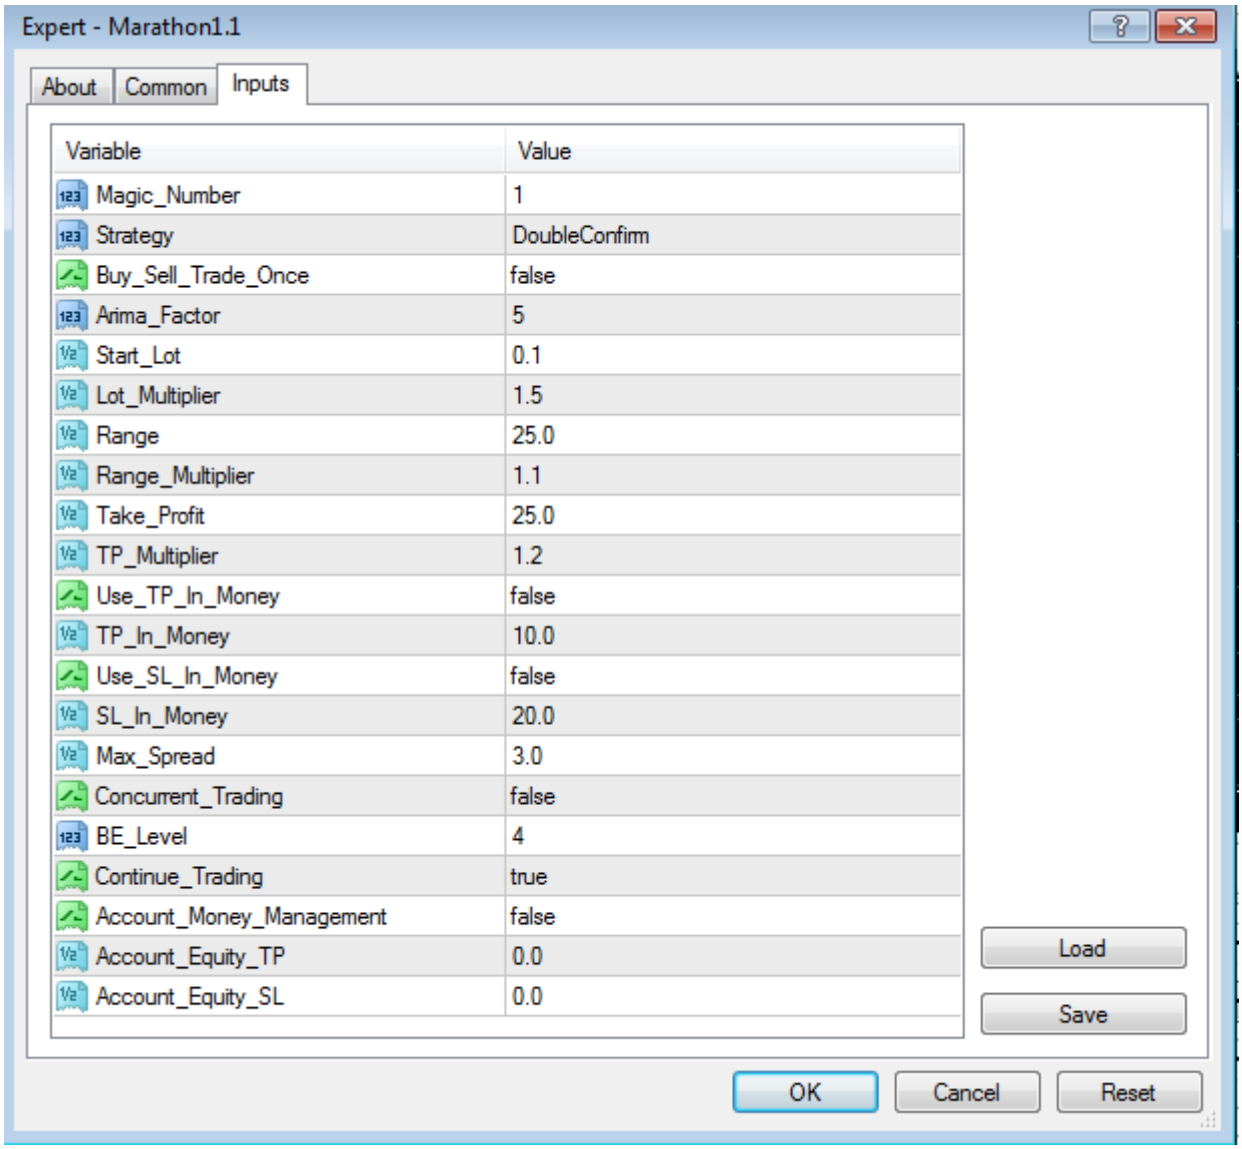


Attaching to the chart

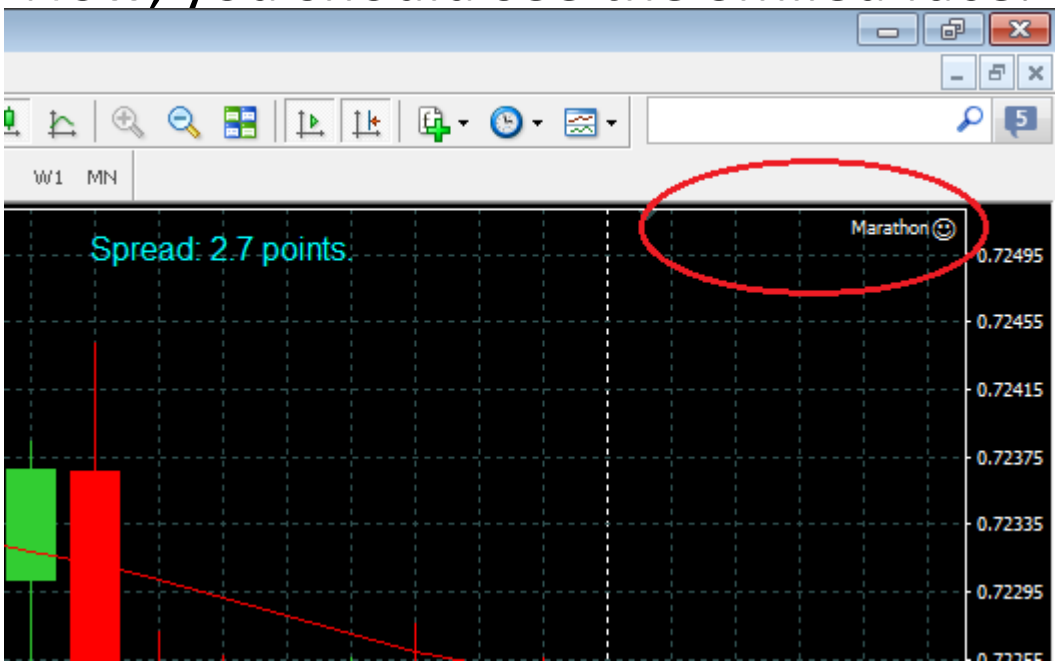


Drag and Drop to the chart

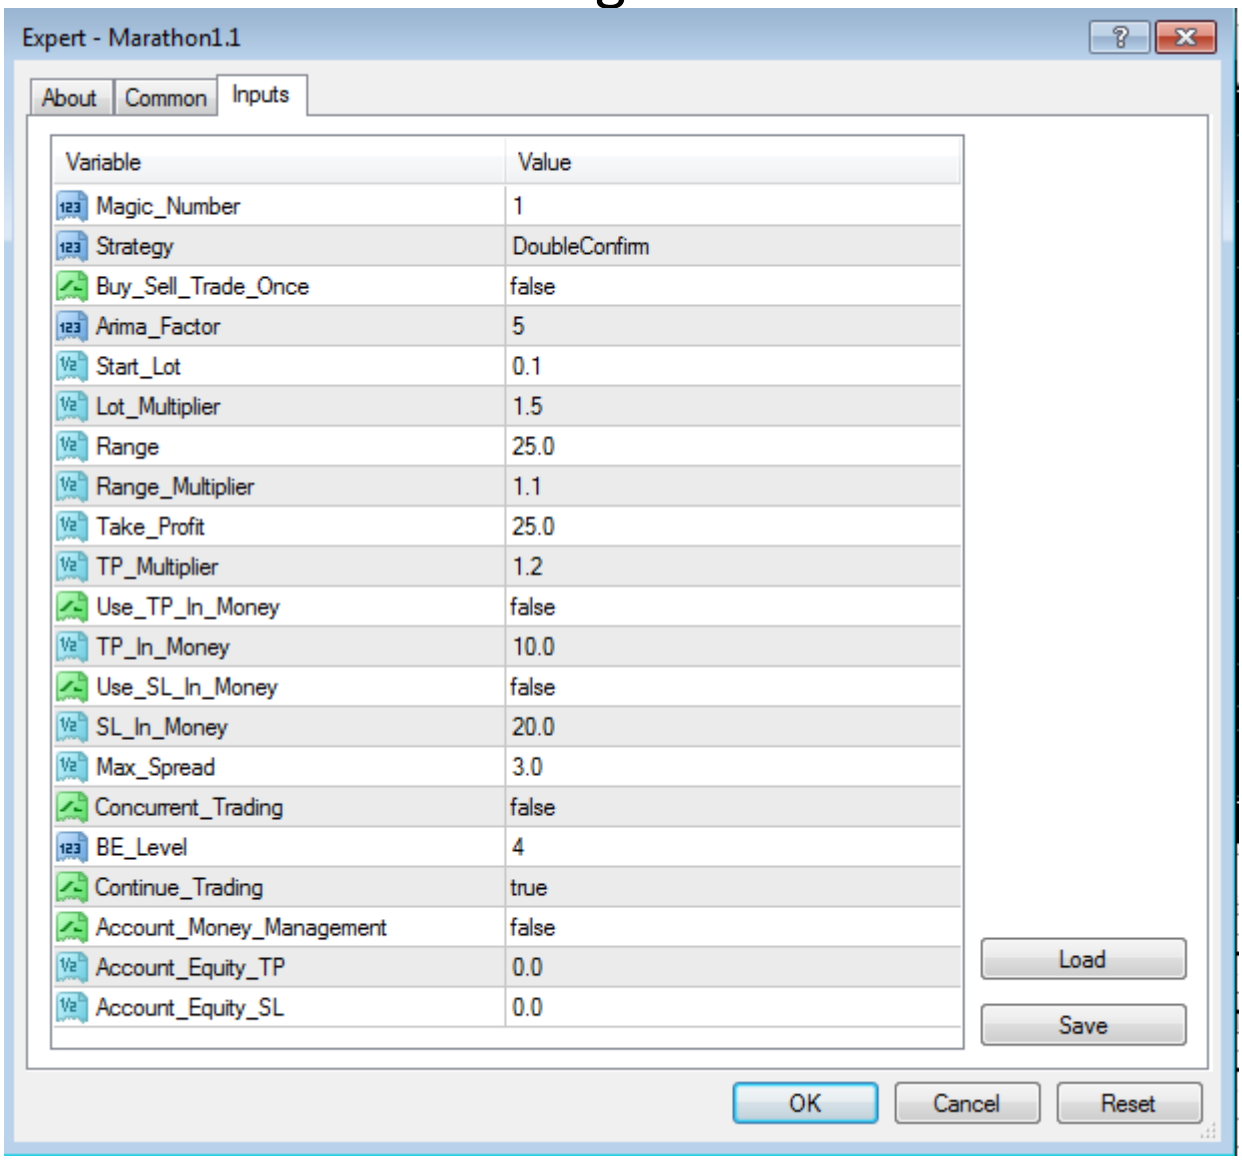
Click OK, after configure your settings.



Now, you should see the Smiled face.



Setting fields:



Magic_Number: if you want to attach the EA in more than one chart, you should set different number for each.

Strategy: Trading Strategy list. Each strategy has different results in different time frames, and higher time frames like H4 are safer.

May be some times you analysis the market and want to trade in a direction, there is a capability in the EA for doing that using strategy field:
Instant_Buy
Instant_Sell

Buy_Sell_Trade_Once: if you set it to true, when you select Instant_Buy or Instant_Sell in strategy field, After finishing the sequence, the EA doesn't open another trade again.

Arima_Factor: An effective factor when you use Arima strategy.

Start_Lot: the lot that the EA opens first trade with.

Lot_Multiplier: Multiplier number for next trades in the sequence.

range: amount of pips that EA opens another trade if previous trade goes in loss.

Range Multiplier: Acts like Lot_Multiplier, but for range.

Take Profit and TP_Multiplier.

* You can set Take_Profit field to 0.0 when you're using TP_In_Money .

You can apply the EA for trading with a stop loss, or just trade martingale with TP in Money.

OR:

You can consider like that: I want to risk $50 to gain $10 trading long martingale!

Use_TP_In_Money: If EA uses TP_In_Money .

TP_In_Money: TP in money.

Use_SL_In_Money and SL_In_Money: As above for SL.

Max_Spread: if spread become more than this field's value, obviously the EA won't open trades. (Using this field is necessary, Sometimes spreads may become even bigger thatn range, if we you don't use this field, the EA continue taking trades until blowing your account)

Concurrent_Trading: it checks for open trades and only allows one at a time when false. Since each instrument may only make a several trades a week, You can trade several at the same time to greatly increase your profits.

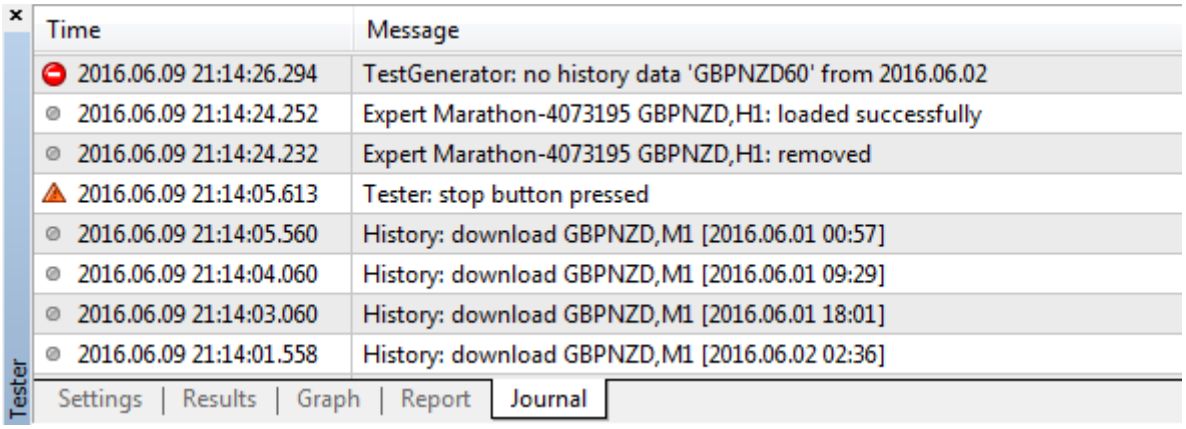
BE_Level: example if you set it to 4, the EA after opening 4 trades it close all trades in breakeven. That is a useful ability.

Continue_Trading: If the EA continue trading. If there are open trades, it takes effect after finishing current sequence.

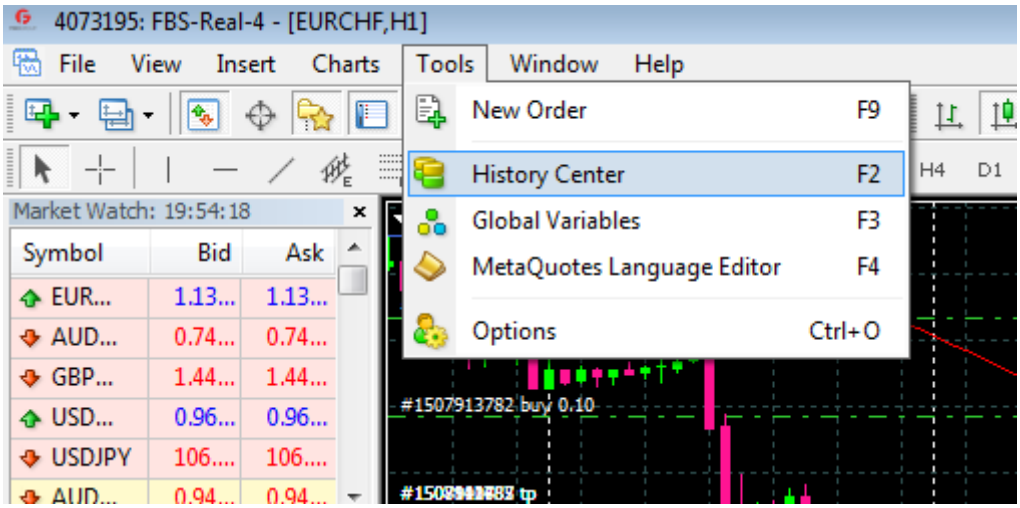
Account_Money_Management: Disable/Enables next two fields.

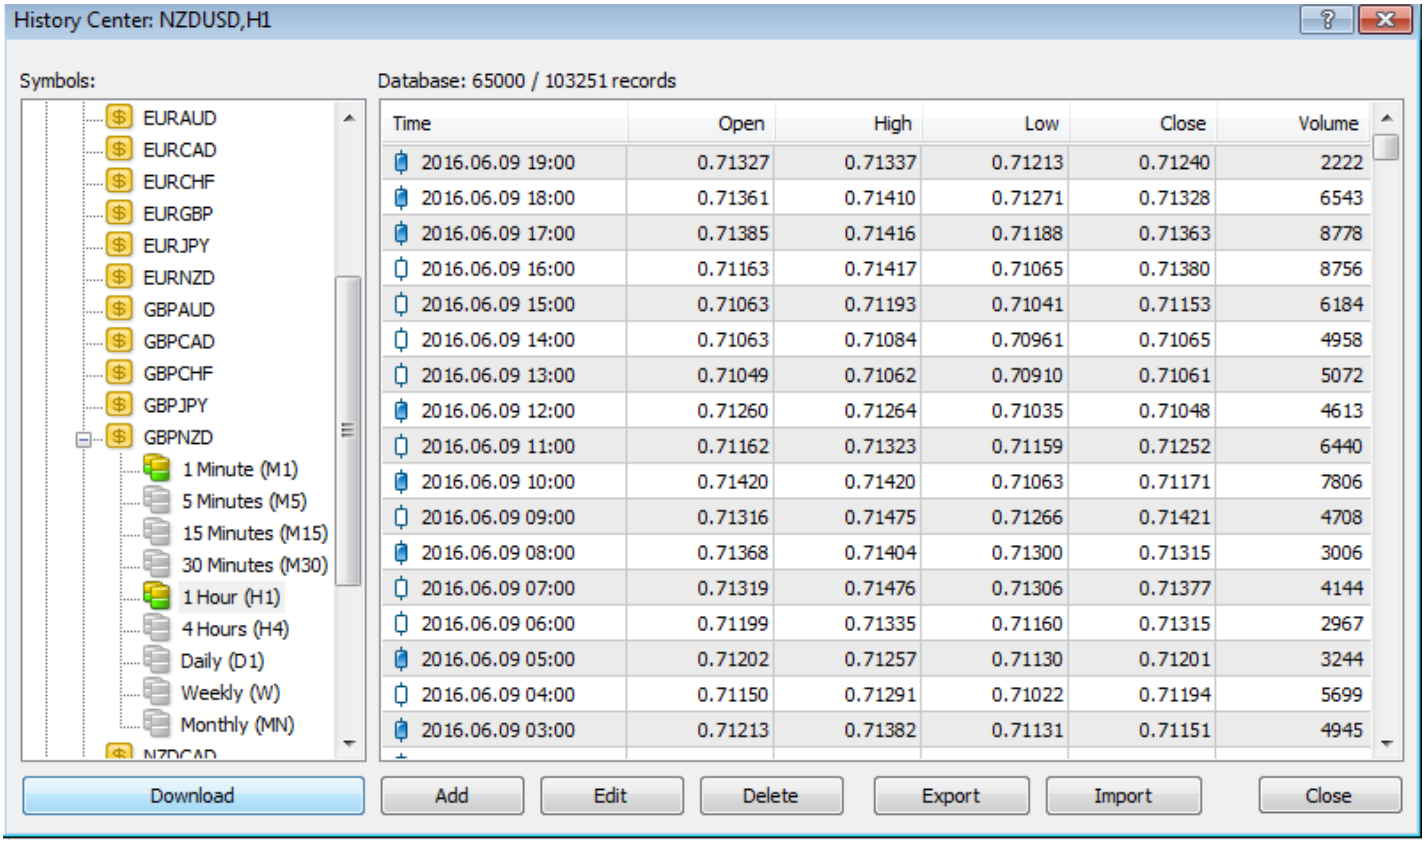
Account_Equity_TP, Account_Equity_SL: All open orders will close when reaches to TP/SL.

Note: Please pay attention to the journal tab when back testing. Sometimes you see the error below:



To fix the message No history data, you need to download history for the pair as below:





Click close button after finished. Then click "Start" button in strategy tester.

-If you decide to use your own settings, It's highly recommended that before attaching the EA to the chart, take a back test for a long enough period.

- Please note that it may take an almost long times to EA to open trade, please be patient because do not losing money is better than over trade and empty your account!

-Control your greed and have a reasonable expectation to survive in the market for a long time…

- Try to get used to working with the strategy tester.
