Update history:

Update: 08/11/2008 - I added full customizable options (color, size, width, and style) to this indicator. It now also has the option to be used on any time frame when the "ShowMoreTimeFrames" option is set to True. DIBS open hours are now more specifically specified.

Update: 12/05/2008 - I added an eMail alert option plus three different options to remove the day Open/Close lines. I also improved all alert notices, time notes, code/user functions, and changed the indicator name "DIBS TriggerLines v1.2a (AAD Mods)" to "DIBS TriggerLines v2 (AAD Mods)".
