

My rules of trading with the indicator:

- * Time frame M15/M30/H1 (This condition only if you have the full version)
 - * Make every trade same risk 1-2% of your account
 - * The Stop loss is not fixed, it depend on the high / low of the candle
- if the signal is buy signal
 SL: Below the low of the candle
 TP: At least 3 times the SL.

if the signal is sell signal
 SL: Above the high of the candle
 TP: At least 3 times the SL.

* If the trade reach profit pips = stop loss, then you have to move the stop loss to the entering point.

* After spending a lot of time on the most known 28 currency pair with the Arrow Trend Surfer Indicator, here is the result of the best pairs and its time frame from M15 & M30 & H1 (This condition only if you have the full version)

from the top its the best

| Best currency pairs with Arrow Trend Surfer Indicator | | |
|---|------------|------------|
| M15 | M30 | H1 |
| 1- USDCAD | 1- GBPAUD | 1- EURAUD |
| 2- GBPCAD | 2- EURGBP | 2- EURGBP |
| 3- CADJPY | 3- NZDCAD | 3- GBPAUD |
| 4- NZDCAD | 4- EURNZD | 4- AUDUSD |
| 5- AUDCAD | 5- GBPCHF | 5- AUDCHF |
| 6- GBPJPY | 6- AUDJPY | 6- AUDJPY |
| 7- EURCHF | 7- GBPUSD | 7- EURNZD |
| 8- EURNZD | 8- CHFJPY | 8- CADCHF |
| 9- NZDUSD | 9- EURJPY | 9- GBPUSD |
| 10-GBPCHF | 10- GBPUSD | 10- EURUSD |
| 11- CHFJPY | 11- AUDUSD | |
| 12- EURCAD | 12- CADJPY | |
| 13- EURGBP | 13- CADCHF | |
| 14- AUDNZD | 14- EURCAD | |
| 15- USDJPY | 15- NZDCHF | |

=====

* Don't enter the trade if the size of the candle that have the signals are very larg because the SL will be very big.

* Some times u will see same arrow signals in the same area of candles, that doesn't mean u have to enter many same trades, No, just one trade is enough in the same pair opened.

=====

lets assume you had enter every signal that will appear with all my rules with fixed risk of your account 1-2% for every trade

- * and you enter 3-4 bad signal
- * and you enter 2 good signal (i assume the minimum good signals of 6 signals)

the total =you will be in profit. because you have set every trade its TP = 3 times the stop loss. and the 2 good signal = at least 6 bad signal.
 so in total every weak / month you will have +\$

and of course the most signal is good signals but i have assumed the worst case scenario with minimum good signal above to try to explain even in worst condition in market you will be in profit.
