

# cTrader Kit Installation

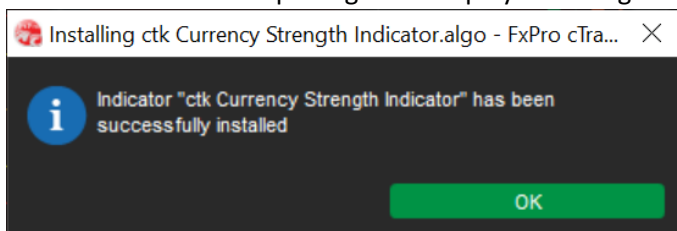

All cTrader Kit products are packaged in a Zip file that will contain one or more indicators or robots each provided separately in a standard cTrader package with the .algo extension.

cTrader recognises these files and knows how to install them. After downloading a package from our web site follow these steps:

1. Use your preferred tool to unzip the package to your local disk storage
  - a. Windows has built in support for Zip files. If you have no other tool simply right click on the downloaded .zip file and select Extract All...
2. In Windows Explorer open the folder containing the extracted files
3. Double click on the file/s with the .algo extension
4. cTrader will launch if it is not already running and display a confirmation prompt

5. Click Yes to let cTrader install the package
6. cTrader will install the package and display a message when complete

If the package is an indicator it will now appear under the Custom option when you want to add it to a chart.

If the package is a Robot it will appear in the list when you click on the cBot button on the toolbar attached to a chart.

All cTrader Kit product names are prefixed with ctk to help you identify them in lists
