

# Multi Timeframe MA Dashboard

The Multi Timeframe MA Dashboard shown here in the bottom right corner presents the bias of the current instrument based on where price is relative to moving averages.

It displays a coloured block for each of the Weekly, Daily, 4 Hour, Hourly, 30 Minute, 15 Minute, 5 Minute and 1 Minute timeframes. All of which can be toggled on or off when configuring the indicator.

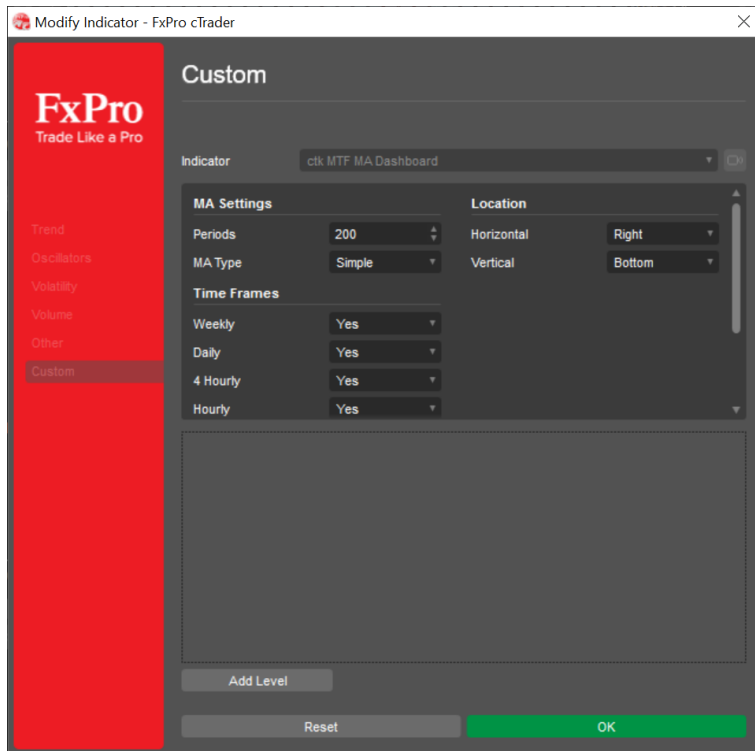

Each block is coloured depending on whether price is above or below the moving average for the corresponding timeframe. If price is below the MA the block is coloured Red otherwise it is coloured Green.

At the time the above screenshot was taken the bias for the pair was clearly downward as all timeframes are coloured Red.

This indicator is an essential tool in the Roadmap setup described by LauraT [here](#) on Forex Factory.

## Parameters

The MTF MA Dashboard has several input parameters that allow you to configure the indicator.

Name	Description	Default
Periods	The number of periods for all moving averages.	200
