Called this UC a few days back because of the triple top and the fact that 1.32 was way too high a price for this pair right now. Also love how price pushed beyond r38 and dropped. There could be a hundred reasons why that happened, my reason could be wrong, but here it is nonetheless: Smart money knows where most of us enter our trades, usually when reversal or turn is too obvious, I notice price to push beyond, catching most of the stops of people who are short, and creating liquidity for people to go long so Smart money can catch the other side...

you should hold this to 2950

buying dips selling rallies with bigger trajectory in mind.

Example EG at 89 excellent place to load shorts once EU deal finalizes GBP will appreciate cross the board. Smart money is building positions towards that outcome.

{quote} Davit, people who question your success do it because they can't imagine how someone can make this much profit while they struggle to break even. It's like comparing children to men. Not even in the same league. I noticed you wrote something along the lines of "Instead of people asking how I make profit out of my system and trying to learn my methods, they go straight to criticizing." Their loss. It shows how small minded they are when they see you work a job and make 13k a month and boggles their mind why anyone would keep their job. Small...

I only posted my results for motivation but I will limit that greatly. Agree with you and thank you 🙌

I have successfully bought AN on every dip. This pair basically is 1 direction only (personal preference) until we break above 1.1
look for a dip and pay attention

NJ on my watchlist. I know Davit is preferring NJ long, but this pair maybe has some opportunity for short. {image}

I prefer certain direction when technicals match. I don't buy tops or sell bottoms.

{quote} Hi Dave. I've been watching you trade for months now. I like pivot trading and your system is great to spot the change of trends. I may become a regular here. Thanks for your contribution. Sorry for posting with a different chart. Here it is with your system. {image}

Cool feel free to contribute regularly.👍 It is my belief that higher output traders elevates everyone's game.

Real life experience I took a life drawing class with master teacher from Italy and he took us such high level that our drawings by average were far better then any class prior.He influenced as to see things we could not before.They were good artists in the class as well hence we were all trying to outdo eachothers and result was entire class was in very high level.

Its same here **Quantum physics** of trading😄

They are people wasting time discussing if markets are random or not, if price is everything, if you are screwed by brokers etc and meanwhile I am grinding here day in day out making money.That's something my work speaks for itself.

The idiots who have accused me of photoshopping my results are in short suffering from envy ,jealously and perhaps even plain stupidity how else to accuse anyone without slightest evidence!

Most of my trades are posted here and results speak for themselves.This morning alone I closed 98 trades and my graph shows it and profit of 2630

Ironic part don't even have Photoshop since everything I do art wise is by hand!

What I find interesting people who accuse me of it by and large are shitty crappy "traders" and can't imagine different result from someone else.

As the saying goes "dogs bark and caravan moves on"

{quote} Davit you will need hire someone to take care and just remove anything out from the way of trading this,cos alone at some point you will need a lot of work 😂😂😂 I really dont know why you guys complain cos youre on ignore,you still have access to the thread content,free read learn download ,practice.use what you have and do what you can. there's no point thread starter to be here everyday to answer on "logic questions", there's no such thing,learn trading first before all this cos thats why many fail and not just using this...

Hi friend I used to get upset about these clowns but now just cleaning it up. I accept that very small fraction of these guys will be here in 5yrs.Most will blow their accounts no matter what system they use.Its just nature of the beast market weeds out the 95% Its just the law of the market.

I put my time and survived and now thriving! No time for idiots and trolls.Its about making money!I can easily do what I do without posting

regards

I am going ask everyone on this thread.

Please don't draw my attention to any thread individuals who say crap about me. Don't care what trolls think about me.
Stay on course.

Just a general commentary I noticed in general. We are living in PC culture that we can't even discuss facts without having people bent over their heads with "racism" "antisemitism" "insult" etc. throwing out at the person.

Example if you criticize Israel in any shape or form you will be branded as antisemitic. This frames the lens in such a way that people stop legitimately question policy and that includes many issues in different countries.

Unfortunately same mindset permeates in forex factory as well. Time to move on! For the record I am not a racist in any shape or form

File 32 - Davit's Posts and et. al. on his Pivot Trading thread-2018-11 Pages - 156

however it is my right to voice my opinion and nobody can censor that!

This is my first post in FF, I never posted here because I don't have enough knowledge to share anything valuable. I am writing this to Thank Davit for your time and energy in sharing this wonderful method. I started using your system since March of this year and was able to make consistent gains, still a learner and makes a lot of mistakes, but the important realization for me was to trade using small lot size, I never though that trading small lots can make money (this was an eye opener). Thank you Davit once again and I wish you more and more...

Wow that's a beautiful gain!!!!Thanks for posting since this morning was all gloomy, trolls attacking took my mood to sober.

Live account and nice size as well. What can I say keep it going! Great job👍🏆💰🍻👊

😄😂😏 Clear? rather too obvious we are dealing with a charlatan. Each his own have fun! Only a year ago this "trader" rookie was lost both financially and ideas but now he has been trading my system for 2 years profitably! 🤔

Guys keep your head clear from people like these. Stay on course!

I am struggling since 8 months.....

Adding something to my equity.... losing the same in coming period..... and then again adding... and again losing....

Nothing changed so far... guess will take more time...

Hi all,

The title of this thread may be familiar to many FF users as it is plainly inspired by Davit's trading method. I have been trading the weekly + monthly Pivot method for last 2 years and have been profitable month on month. The system works but as they say, it is the trader more than the system.

Hey Davit it's halftime looked at ff to kill time before 2nd half and I have 2 questions. First why get bent out of shape with what other people do? Second the argument whether your results are real why not do a video of you trading live with real money that will remove those that doubt. To just remove because someone don't gets it misses the point imop. If this bothers you remove me

I don't get bent out of shape what others do my previous post was a warning to anyone following a wannabe "trader"

Second point I really don't care if anyone thinks my gains are not real.I know they are real which I have to deal with IRS and Taxes and frankly if some people think they are not real then so much better usually I find generally less talented,idiots question without actually reading or observing my posts.

Its a good perimeter to weed out the noise makers.

My attempt at this weeks Calendar. Monday 9:00am USD ISM Non-Manufacturing PMI 9:30pm AUD RBA Rate Statement - Seems like no change is in order. I will be following this one because however it moves it will, in my opinion, have NZD follow suit on Wed. Especially if they do change rates or have dovish Statement. Good for AN trade. AUD Cash Rate Tuesday All Day USD Congressional Elections - Republicans maintain control Dollar rises...and I think big. If not, it will be a long winter for the Dollar and Trump and US Gov will be back to the old boring...

Hi Mundo

This week is all about the pink elephant in the room which you barely touched. Feds rate is most important event and it possibly shapes not only this week prices but entire Nov going to Dec.

Just thought you should have a solid plan how to trade it!

Custom dictates that the Fed does not move rates in an election month, and as we might expect the market positioning reflects that, with 94% of November Fed funds futures positions signalling no change. -[Pepperstone](#)

I just thought that this statement carried some weight. I see the elections deciding what the market will do this week. But I could be wrong thanks for pointing this out to me.

Hi Mundo

The way I look at the calendar events is to gauge possible trading scenarios and creating awareness when and what.

I start with most important to trickle down.

Feds rate. In my view if rates stays the same USD most likely may get a beating and could get a beating from start of the week however it may not be the case, either way my

bias is USD weakness to continue and more to come.

Doing the calendar is to put you in Tune with the music of the market! Your focus/ filtering where to hit hard where to easy off the gas.This takes time but more you do it stronger you become as a trader.

Having said this firm concept of probabilities must always be in the background meaning market is king no matter what you think however what you think matters.Seems paradoxical but its not.You must learn to let go of your biases when clearly market is doing totally different thing.

Its worst far worst when you are wrong about the market and clueless why so.This happens to lot of traders who think "everything is in the price" or "in the chart" this is hogwash you must think and act like a pro trader who knows his environment what he/she is trading every week!This attitude sets you apart you are in control ,in driving seat and you take advantage of the market not other way around.

Cheers

Great lesson...since I have to learn when to do this.

Thanks for your input always looking to become a better trader so will work on this. This is for me a huge improvement as I had mentioned from my start I was one to trade strictly technical and am still grasping the fundamental part. Good thing you keep making it clearer each time.

I am fascinated by Quantum physics been reading it a lot lately and strange that some of the stuff I can relate to trading like looking at a subject/object and changing its properties you are influencing the observed.This intuitive in tune with market is \$\$ but must be done every week.The goal is being aware until it becomes natural.Kind of hard explaining but you will get it more you go over calendar events every week.In year or so doing it you will be a different trader far superior one.You will glide through news and technicals taking \$\$ from the market.

Nice both AC and NC opened lower
I shorted both lets how it goes once real liquidity kicks in. Still heavy short on UC.I think this may plunge lower once Feds rate remain unchange

Hi guys

CAD is taking a little beating (on crosses mostly) because of crude dropping. It kind of surprised me since Trump is reimposing sanctions on Iran... should correct soon. Still holding AC NC short they are within my trade tolerances however both in DD

something to be aware of trade opportunity may spike a little taking weak shorts but I do think its "due" to correct

AJ has little more room north

In 20/20 wished kept my NJ AJ longs longer.... squeezed 30% of the move not the best.

EG bounce up 89 would be great. In longer term I see GBP getting stronger
notice double bottom now
Notice my anglator is all red but means nothing. What's important that you recognize price is at solid support.
This is where dashboard MA traders get killed blindly following arrows and not looking where price is.
This goes for strength meters. Strength is always relative term location is what's about!

Its a cross may have little to do with USD or Elections or anything else.Its just system signals are perfect rest is just probabilities

If I take perfect trades like this I know I can hit 70-80% winners over chunk of trades.Would this be a big winner? I don't know but its already a small winner.

{quote} So the reason to only trade one direction some pairs is because some huge negative swap that may stack up? Makes sense as if you are going to hold some trades for a while it can be really some good % of your DD...

yes since we are trading swings swings can last a week or more and you should be able to hold without too much swap drain

Same reason also why I basically always buy NJ AJ CJ but seldom sell
Moving forward we have to be very precise selling USD because it becomes costly to hold.Its not just me MM big banks do it for same reason.They prefer collecting the swap.Once USD becomes 2.5+ I will most likely focus on crosses only.

{quote} Yes, it's the common lingo. But when you can see for example a very strong NZD and a very weak JPY is steering the whole market for some time, then the USD is just an irrelevant currency.

Not sure I can call it irrelevant after all its the world's reserve currency and every currency has its shining moments USD has been on fire for months....That is obvious and now may go into correction. NZD dropped from 73+ to low 64 since march of 2018 that's staggering depreciation 900pip drop....

We are simply going to ride the wave up on each stairs...

Heads up important news events on NZD that may weaken it which is what I want coming up 1hr 3min
example of pairs that may effect strongly AN NJ
WE could finally see market love of NZD fade... or not....remains to be seen

When you click on systems threads here almost none talk about news events and to me that's extremely strange....Too much time spent on indicators....
Why would you not want to know something that effects very thing you are trading is beyond my comprehension...

Its like a waiter not knowing about the ingredients in the dish that potentially can kill someone with allergies.

Had to run to VOTE

feel better now.Very likely Dems win tonight which I anticipate USD weakening.This is fueled by anti Trump sentiment which is very prevalent now.

Trump had good ideas but made some critical errors getting out of Paris Climate change was a huge mistake.Just about every sound scientist agree global warming is real only need to look at Greenland and polls Ice Caps melting to get an idea.

Had he acted more reasonable on some of these issues he would of easily got elected again.Sending 5k military to the border to guard families with kids is overkill.Seriously even an average person with sound reasoning can see how political this thing is....Anyway as a Libertarian Trump became to me and millions of others great disappointment.I voted for him but not now...

My conscious is clear.

this is still running

I cut where it needs and let trade run where it needs. I find it funny how people get floored about DD. It's part of my trading. It's unavoidable however when I am wrong and trade is not working I have no issues cutting it lose. It only scares people who invest big lots with tight stops. Not what I do. I do total opposite.

Quoting Mundo

{quote} I'm sure most feel the same way; however, I cannot agree with the Troops issue as it has everything to do with two large Caravans from Central America coming into Mexico illegally on their way to USA. Here is a post with more info <https://www.forexfactory.com/news.ph...7#post11640723>

Immigration is a complex issue. American farmers do need cheap labor unless Americans want to pay 5x more for produce and that's unlikely to happen.

Here in Boston Most restaurants can't find anymore support staff like dishwashers,busers,cooks. I don't see Americans applying for these jobs and some Americans think they are taking jobs away.Lets be honest nobody other then poor immigrants do these jobs.Have you seen a white boy cutting grass in LA? Never never seen one...list goes on and on.I am not saying lets have open borders but lets be honest

about immigrant's contribution in terms of work and paying taxes. I am sure there can be logical mechanism built that allows certain number of immigrant to come in without having people flip over.

I am always amazed that just about every cab driver in Boston is Haitian or immigrant. Can't remember last time I took a taxi and driver was a US citizen born in US. These jobs are out there but obviously not attractive for natives. So if US born citizens don't want these jobs then why cry about it when poor immigrants do it. What Trump has done create kind of terror hysteria without facts and fear overtakes common sense.

If you are not happy about immigrants please ask yourself would you do the jobs they are doing.... I bet not. Case closed

Below current posting of jobs in restaurants in Boston. 200 back of the house jobs bussers, food runners etc. Can't find job BS you just don't want these jobs!

{quote} Great work here Davit. Your system is indeed working and I am living witness. As you quickly show us the result of this EC trade which you entered not quite long and it has started growing leg(profit), can you show us your AC, NC and UC trades too since all of them are in DD for now. This is going to clear the air for those wailers questioning you how you manage situation. If people deserves to see the way your winning trades goes, I think they equally deserves to see the way your DD trades goes. Though, you have said it that you will close...

Stop Loss

This is advance trading hence I am going to let you decide this for yourself. What I do is not

File 32 - Davit's Posts and et. al. on his Pivot Trading thread-2018-11 Pages - 156

relevant since my account is larger then typical retail trader which is 2-10k and I manage it what works for me.Having said this letting 500 loss become 10k loss is idiotic no matter what size the account is.You must have exit plan.

1st page.You seem not to get the meaning.What I do with my account is appropriate with the size.Showing my DD trades only fuels army of haters and trolls who don't take time understanding my system.

You are removed

If you personalize losses, you can't trade-Bruce Kovner

{quote} you post a picture where you show clear scalping bellow and above 38 and you request others to show their DD? i hope youre not serious. but if youre serious then you will lose all your money using this system in the way you show in that picture.is clear you took that trades JUST because Davit said he is holding his shorts in AC and NC. you got this system all the way wrong by copy trades then forced by low balance and DD to close early and show like scalping. short at 38 you DONT take if your edge might not allow you some DD on the way....

Hi friend.Obviously this guy was upset about the failed trade and thinks what he does applies to others.Does not!Week is not over yet and we trade weekly PIVOTS !You did raise key point about 100 and we got rate decision coming up which if unchanged this thing will deflate fast.If not then I will do what needs to be done that is managing my account that I SEE FIT

cheers buddy 🍺

[Quoting Hickson](#)

{quote} I think from years ago you recommended the book "Bird watching in lion country" which suggests having "mental stops". The funny thing is that this is a highly individual thing. While you do it with scaling in on small lots and closing them after your MM plan, it might seem to most people that you just do not put a sl and then when it does not work ... well, then what? But they ask the question too late ...

Hi friend I do have recommended [guidelines](#) for SL and also I don't like babysitting what others do hence "This is advance trading"

If a trader does not have EXIT plan then he/she should not be here period!

Professionals always think about RISK rookies only think about profits.Takes time to switch this paradigm. I have 30k margin now but

File 32 - Davit's Posts and et. al. on his Pivot Trading thread-2018-11 Pages - 156

don't want to over trade! I know where I want to be in terms of comfort.I can get easily over taken by greed and find myself in margin call.Not gonna happen.I control these emotions just fine.Making 10% + a month is more then enough.

Closed the whole NC position for loss, so month start got even worse. I really can't see this stopping any time soon. NZD gets stronger and oil weakness, too much risk for me ... even if it falls after rate decision so be it, I'm out and looking for other opportunities.

you have to manage the account then you must

personally would of waited until Friday.Judging from your stressful post I can sense your position was large hence any more DD would of reached critical level.Well why don't you reduce future trade sizes so you don't cut losses when you should not.I mean cutting it with calm logical manner not doing it because account is in jeopardy.

regards

Violated my own principles and kind of upset at myself. I usually buy NC AC only and never had issues trading these 1 way direction until weekly monthly tops and broke my own "style" and not happy about it.

I must step back and refocus on my trading. This forum can be a distraction. Sometimes having an audience works against you....

Anyway learned few lessons of my own Stay true to my own trading. There are reasons why I do what I do and not happy violating those.

I will get out of crappy NC AC shorts but lessons learned I am at best when I trade what I believe. Not blaming anything other than myself. Trades still can be profitable but that's not why I am upset...

Anyway moving on.

[Quoting Mundo](#)

I study my Trade Reports also not just the charts. And this is what I see. I am most familiar with and trade AU and UC, I add UJ for the volatility also because I learned forex on it and at times EU just because everyone else does. But upon reading my trade results I am better off eliminating UJ, EU and the rest and trade strictly AU and UC. Why don't I you asked? Because it is said that I have to trade various pairs and markets in order to take advantage of every opportunity and is the way to success. I need to stop and seriously consider my options...

I actually traded for few yrs almost exclusively commodity pairs and did not Trade UJ. I am ok now with the Yen. I know what you mean. You trade specific pairs long enough you start intimately know its movements. However saying you could of increased lot size is 20/20 when live its a different story.

Trading is never ending learning. Strangely reminds me of chess. There is always room to improve which is why humility is desired attitude. Market usually crashes "know it all" types and I have come cross many here.

Question to Davit & everyone else: did you make a statistics about average TP from S/R levels after first touch? I have made EU and example from R78 the average TP (last 58 weeks) is 112 pips. Do these statistics have any significance?

That's why I have ADR indicator... Its a nice tool to see the range. PA should dictate TP levels. Some days are short some days long. Events, fundamentals influence like in 13min price can shoot up 200pips or down 200pips

Focus what is taking place less so what has happened.

Just a question R78 to where? Your post is vague

Hi guys

Few thoughts I like to share. AS you probably already aware when things are going well this thread is bustling and when not gets quiet. Its natural \$\$ attracts however this system is not about 1 week's profits or even month's its about quarters. This is how I measure my success

When you read THE Market Wizards or Hedge Fund Market Wizards you get to know real traders who if hit 20-30% gain annually would be thrilled and I am saying I already hit 90%. Not going to post my entire stats but trust me Its true. If you doubt it that's perfectly reasonable but I know what I have achieved and I achieved great deal and in the process shared good chunk of it free in public forum.

In short keep your head high and thrust forward few bumps should not derail your goals. Its a marathon and not a sprint. There will be mistakes made and they are natural since we are dealing with lots of unknowns however when made don't beat yourself forgive yourself learn from it and move on.

The Secrets To:

Emotion Free

Trading

"How To Consistently Act

In Your Own Best Interest

With Your Off-The-Floor Trading!"

Written By Larry Levin

"One of the biggest reasons people get into losing streaks while trading is because they confuse their losing trades with themselves. In other words, we conclude that because we had a losing trade or a series of losing trades, we are a losing trader.

But the important thing to remember here is we are not our losing trades. **Losing trades are part of trading.** There isn't a single trader in the world who doesn't have losing trades. The only way to avoid them

is not to trade in the first place. You cannot be a successful trader until you take mistakes and losing trades for what they really are. They are simply by-products in the trading game and need to be used to gain learning and understanding. But in no way do they define us as a person.

But that is where the big problem comes in. Many people let their losing trades and mistakes define them. If they're having trouble and have had a series of losing trades, they start to think of themselves as a loser. They continually think of themselves in that way. As we know from before, this kind of thinking will just bring on more of the same. Forgiving yourself completely is the only way to avoid this trouble. You are not your mistakes and losing trades. You must put the past behind you and go forward. Holding a grudge against yourself only hurts yourself. Forgive yourself, it's the only way to be successful.

[Quoting ohakaba](#)

If there's something I've learnt trading and spending time on trading forums is keep to yourself especially your trading, posting trading idea to folks and then coming back latter to explain to your followers what went wrong or how you f***ed up is just an unnecessary pressure,I'll rather f*** up and bere the consequences of my trading actions to myself and not expose myself to the world's opinions or persecution. Belive you me the consistent profitable trader might be on a forum but never post any trading idea, it just ain't worth it... Trading...

Hi Ohakaba

Sharing ideas in a forum is what forum is supposed to be.I would not characterize as "pathetic" however looking for signals may be without putting any work.

We own our trades no matter if you are posting or not.To me makes no difference.The future is all about probabilities.

There are good traders here at FF worth reading CNtrader,Strat,Mrpip

File 32 - Davit's Posts and et. al. on his Pivot Trading thread-2018-11 Pages - 156

(his videos are great) Scott many others and if these traders did not post at all we would all be poorer. There is something worth mentioning "giving back"
cheers and feel free to keep it to yourself👍

Hi Guys Lets do something more interactive here. Instead of me posting my calendar events I like you guys to post your summery of events next week. Which currencies are in focus and how that may play out. Its rather easy to spot Thanks

These are the news I will be paying attention to.

Monday

6:30pm AUD NAB Business Confidence - Leading indicator of economic health...I am standing on the side

Tuesday

5:50pm JPY Prelim GDP q/q - Forecast negative but I see room for a a higher actual number than forecasted. Buy JPY

6:30pm AUD Wage Price Index q/q - Leading indicator of consumer inflation...forecast is same

Wednesday

7:30am USD CPI m/m

USD Core CPI m/m - Both forecasts are positive this may well be good for dollar -However not buying dollar

6:30pm AUD Employment Change - Too much room for a lower than actual number

AUD Unemployment Rate - Forecast is negative this could be when it starts showing short. sell AUD

Thursday

Loaded with USD news all day. Red news are forecasted positive but all the rest are negative. I am going for a not good day for dollar Sell Dollar rest of week.

Friday

7:30am CAD Foreign Securities Purchases - Both good for CAD Buy CAD

CAD Manufacturing Sales m/m

What I see is AU, EU start week short UC, UJ start long and reverse by Thursday to continue a weak dollar week.

You must see these things right away

We got 3 GBP events in a row **TUES WEDS THURS(also all 3 projections are positive!)**. This should be obvious. It should be right there on sticky on your PC to watch and track G pairs from open of the week.

AUD dominating the calendar as well. So when I look at the calendar I pick currencies that dominate the week and go around focusing on it. Don't have to trade it but I am prepared to trade it should opportunity look good.

The whole exercise about the calendar is to be aware news that can move price and pairs that it effects. You can't do this without actually putting time to go over events.

Weekly Calendar November 11-17

Attached a PDF file, MS Excel Spreadsheet. A disciplined format for each weekend that is an important part of my Trading Plan.

I congratulate Davit in making me look far more deeply into the week ahead. Thank you.

Copy direct from FF Calendar and paste into MS Excel. Note, revised information from previous announcements keeps their font color from the FF Calendar.

With this copied and pasted, it is simple to work through the week, deleting unimportant events, highlighting others of importance plus forecast projections. By working through the Calendar and color highlighting boxes you can gain an insight into the week ahead. I particularly highlight the Forecast versus Previous. Although I may

File 32 - Davit's Posts and et. al. on his Pivot Trading thread-2018-11 Pages - 156

highlight more that just Red or Orange announcements, I rarely get surprises!

This Calendar is the first on my clipboard. Actual figures can be handwritten as necessary.

I further check websites, BK Asset Management (Kathy Lien, Boris Schlossberg), Investing.com, Trading Economics and others for their comments. This further prepares you for the Trading Week ahead. The column where I have Positive or Negative, I use this for my own comments and add further after reviewing the sites above.

Hi Guys

We have a gap on GU either gets field next 24hrs or this drops lower about 40pips with present price with lots of "green data" coming up on GBP my bet is it closes the gap plus more

Goes without saying I can be 100% wrong.You own your trades

WE got good data coming up on AUD **hold on to your AN longs! I am!**

Hey Davit and et al,

You are right as usual. AUD economy is expanding and being watched by the Feds as a model of economic growth. Interesting:

<https://www.bloomberg.com/news/artic...conomic-growth>

Well, I took a few long trades as you suggested:

My AN chart:

interesting and worth reading

"It could be a challenge for the stock market in the fact that about **40 percent of the S&P 500 earnings are generated from outside the United States**," said Michael Arone, chief investment strategist at State Street Global Advisors.

I think pressure is building for finally USD to go into correction.

EU still has lots of room to catch up with GU not late to get in...this is just my opinion

GBP is basically intertwined with EU both move in sink more or less and difference is on EG target should be 1.15 and GU 1.32

This could reach by Dec rate decision or way earlier as we already know market is always ahead sells in advance and buys in advance.

Has USD index reaching its tops yes just my opinion.

After Dec hike we should see a pause on Feds hikes because there are signs already Wall Street and rest of global markets are under stress.You can't have growth when you are hurting yourself with less corporate earnings=less hiring and expansion and strong dollar hindering

File 32 - Davit's Posts and et. al. on his Pivot Trading thread-2018-11 Pages - 156

exports. Housing is already showing signs of weakness and this is big it effects lots of industries like construction.

I believe 2019 1st 6 months will be decline of USD cross the board. Goes without saying I could be wrong but that's how I see things now.

It was a profitable day. However, I should learn keep stay in profit. At work it is difficult for me. {image} {image} {image}

Switch to daily candle and simply check out the trades when you get home. I see you had EC well OII still plummeting and Euro getting strong so you could of let the trades run

EC is heading to WP and could even smash it and start tracking on 50's
Canadian Economy and fundamentals are solid however Oil dropping like cheap shampoo is hurting. Saudis and Russians may cut production but that has not materialized yet only rumors.

Great to see folks making the method work and either in winning trades or managing their DD. As for me I am still holding my trades but have not been able to either trade or analyze. I am a stay at home dad of 3 daughters and trade full time...have a sick baby and she is getting all my attention all day long till she is better. Have been looking at thread and charts every now and then to stay in shape and will be paying attention tomorrow for all those USD news.

There have been talks about the USMCA trade deal might be having issues passing so am paying close attention to that. A Mexico's Central Bank Del Cueto resigns but it was for health issues he had served for 30 years already nothing to do with USMCA nor will it affect the outcome. Still have USD short.

Its funny how people get worked up about nothing.
What's important is \$\$ yes folks \$\$ and we are making it! Follow pivot principles shared here and you'll make bundle. This is in my view one of the best systems out there even copied by the Russians....Its there in their Forex forum...
Yes I am proud of it! Instead of keep talking about charts I actually emphasize real events that shapes price and that's unique. Its a step up to professional trading when you are aware what you are trading! No different then a carpenter knowing his wood types, glue types, joints, tools and how to use them. Imagine if this carpenter all he did read blueprints....not going to work. You must know what you are dealing with.

I get lots of PM's about trend.

Am I counter trader or trend trader answer is both.Seriously lot of these guys don't even know what trend is.When they say trend they often think swing.Trend is more then a swing to me.

Lets look

H4 up or down? Hard to say right its just bunch of swings and lets look at Daily

On Daily trend is going up from the low that's obvious.Now if you buy at H4 swing do you counter trade or trend trade? This is where lot of rookies get it wrong.

To me and lots of seasoned traders trend is the main river bigger TF Daily Weekly Monthly and also trends do come to an END hence you must be open to accept that there is NEW trend developing.In this example indeed new trend is bull.

Talking about trading psychology. One of the main issues I always have is to let trade to develop (i.e. profit run).

Hence when I see a retrace after a good move I often close the trade in advance. And to reinforce this wrong behavior, some times that I don't do this, PA really go against me- We've all been there and that's why Mark Douglas's teachings are so important to deal with such a inner sabotage.

One more thing that I find useful when I'm in this situation is to switch timeframe to see how things really are, as in this case for EN long in M30 vs H4.

You can say it's obvious, but it helps me a lot and whatever works... is fine. 😊

{quote} Definetly closed mine too soon, how can be that I can hold floating drawdown but not floating profit? Jeeeeezz.....

Trading is challenging does not always work out the way you want it

Example GU at 1.30 I should of got out and greed took hold of me I kept it since there was news about Brexit deal and I thought it had great potential then I slept forgetting to put SL on profits then shocked to find price dropping 150pips over night because of 2 MP quitting

Don't beat yourself takes time but even now its challenging at times. 50-100 pips profit is reasonable.

{quote} I never thought about choosing one direction for a pair but that is a very good idea. Nice tip thanks. You have a lot of experience so you have a good understanding of how pairs behave. This is a good edge. I will work on getting to know pairs better.

read

Dirk du Toit Bird Watching in Lion Country. I think the book is brilliant but not many got its essence. Lot of traders hate it. You should read it and make your own mind. When you read a trading book or read interviews with traders like Market Wizards series you filter out what is brilliant and what is not. People idiotically only focus what is not instead of what it is. Small difference but makes a huge impact how you review and synthesize ideas.

Closed EU longs **+2325** 💰🍺 also had positions from bottom chart does not show.

Just glad to get out of 2 account drain pairs UJ and EU in terms of holding against USD (swap fees) was paying over 100 each day....

Now will start shifting on crosses where swap is not an issue

That's way too much money for that. When I used to live in LA early 80's his works was reasonably priced relatively. I don't find his works original or innovative. Some of his line drawings I like but I love line drawings well done by anyone.

2nd week made healthy profits 😊🍷💰 I think its great on trajectory for my 10%+ a month.

Please don't ask for verification what I just said I am deeply suspicious of public forum characters. My trades are posted for skeptics. You'll get an idea by just looking at the number of positions...closed in profit. Looking forward for next week

looks like Feds may started worry about strong dollar,global slowdown and its influence on US economy.Their hasty hikes had no reasons specially that there was no inflation to speak about.With oil plummeting down it takes the wind out of the sails.

What this means Selling USD on rallies but must be smart about it because holding USD sell for week or more is costly so surgical strike is required.Correct timing.

UJ pushing to 13.50 area good place to look to short.Love to see AU drop to reload and NU as well

Hello friend, with Audusd taking out 0.73 strongly, I believe this could be a good long short- to midterm. Next week Aud data could give a boost, fundamentally the pair should be sound. Usdjpy I am not sure. Maybe one more push somewhere near 114.30? Stops must be triggered for max liquidity 😊 But who knows ... Just play the most profitable coin flip.

[Quoting FXtrader22](#)

hi guys, can anyone tell me if daily, weekly, or monthly pivots are more effective? thank you

please minimum read 1st page I know its difficult...the reading part...Its always easier have others do the work for YOU

also you can use search function on this thread since questions like yours have been answered but did not expect you taking your time do some work.

you are removed for total disregard of members time here.

5 more pages on search monthly and I am sure you can use the same search on daily.

Attached Images (click to enlarge)

How to trade pivots

Zone 61-100 usually areas where swings fail and you can counter trade or trade with the trend. Works both ways

Weekly Pivots are **equilibrium** creating bias below sell above buy. I usually trade 61-100 however have made trades above or below WP

Watch PA its the queen (chess analogy) !TDI and angleator are **supportive actors**. I prefer to see minimum 15-30 min candles red or green before entering a trade however this is aggressive and I have years of experience and more conservative approach is wait for 1hr to h4 candles. You may lose some pips waiting out but could also save you pips by not getting in early.

Hi guys
Light week in terms of events AUD and CAD in focus some of my favorite currencies.I anticipate CAD going into correction which has been hold up by Crude drop but Crude has stabilized so far and that will help the CAD
I think more of USD correction in the Cards and wild horse GBP is still a wild horse.It can run any direction depending on news on Brexit.I don't know about you but I am sick of this Brexit drama.Get on with it that's what People of UK wanted!

{quote} Basically it sets the tone for the trading strategy for the week and it adds another dimension to the entire strategy on top of the pivot zones and price action. Guides me to focus on currencies that has the potential to have a good set-up or currencies to avoid. Thanks Davit.

I would add never say "I will buy or sell" prior of market open Instead say might,may,possible trades this way you are consciously and unconsciously not fixated to take action before market open. The factor of probabilities should always be in the background like Gravity. I noticed this with new traders doing this exercise almost always forget the probability factor.

Grrrr, what a anger! I don't know yet what happened, but suddenly my trade manager closed all positions on my GN long missing TP. Maybe it was me setting wrong values in the EA or a bug I put in the code, I still have to discover, nevertheless about 100 pips x 15 positions evaporated in seconds is not a pleasant feeling. 😞 OK that the move is due to unexpected breaking news, but other times similar leaks cost us money- Anyway whatever it was, it's 100% my fault, I have to review the entire process possibly fixing what's wrong and be...

Hope you work the bugs out.Me I trade manual only. 🤖 You did miss shitload of pips

Davit, Iam following your thread form past few days. Do you have any documentation/ or procedure how to install your Pivot indicator on MT4 with fully functional. Appricate your help.

open data folder-MQL4-Indicator

drop in indicator folder

refresh by closing and opening program. Click on templates click upload and upload my template.Drag drop on template.

Now you must switch TF to see pivots.Sometimes does not show because its calculating hence click on different TF then back desired TF

In the end when I saw again a possible reversal around WPP, I closed my held for a long time NC short trade. I know that later today CAD news are expected green and can support the loonie, but as anything can happen they could come out the other way and I prefer to close this week with no open trades. {image}

this has miles to go south....but taking profit is profit

we discussed about when holding trades its best with +swap with EC no issues you are +1.75 hence should relax you and allow time to do its thing

People forget TIME is a factor in trading.

Would I want to short AJ for example? NO costly even shorting UJ is costly. So you have to think about what pairs to hit hard and which to ease off

Paid -348 swap this week alone and by Monday it will be close to -600 it does add up

over -1500 paid for swap this month. That's significant. Have been more aware how I go about my trades now.

{quote} From a fundamental side I'm surprised you went for these. There is a very low probability it will pass in Parliament. It seems very likely you will see euro gain on gbp.

Yes, please don't try this at home!

As Davit and most people here trade H1 or M15 time-frames, you really need to strongly follow fundamentals.

But because I really suck in reading fundamentals, I stopped trying long time ago. Instead of this I do pure technical analysis following daily, weekly or monthly charts. Now 5 red news in one week is simply one candle for me...

For example this EG is 300-400 pips range in the last 12+ months.

File 32 - Davit's Posts and et. al. on his Pivot Trading thread-2018-11 Pages - 156

I see price rejected 4 times in a row from WR38 on Daily TF. That's good enough for me to trust this level for now.

And as no red red news in the last 12+ months on EUR/GBP had a power to break the range. Should I be worried this time ?

edit: grammar fix / i hate typos...

i think Degolep is the correct way to draw a fib swing because he's measuring from the previous bearish swing. Davit's swing top(0.0) should be at at 1.1468ish where he measured the bullish swing retracement.

Edit: well, since you have already banned me from this thread for such a small thing, i can only edit this previous post for the "correct" way to draw a fib retracement. I think that's what your gartley pattern picture says also. Always draw from the start of a swing 100.0 and your fib should be pointed slanted right towards your 0.0. Notice how your fib 618 is at 1.1323 and mine is at 1.1313?

You are way incorrect if you think that is a bullish retracement.

{quote} Yours is incorrect. Always measure where price is coming from. In this case from top swing to low hence measurement from top to down. Opposite true if price was ascending from bottom then you measure from bottom. Hope it helps bigger fib numbers should always be closer to 100 easiest way to figure

Hi Davit

If you are referring to this picture sorry to say it but you have it wrong! the swing is from top to bottom of the screen and what you are measure is the retracement from 0-100.

Unless I am doing it wrong for more than 20 years 😊

Hey Davit, unfortunately this was brought to my attention by a concerned PM message and I happened to check my pm messages. Why I can't tell you but I wont do it again till next year so I'm not bothered by remedial nonsense. That said, in the interest of being fair I'll respond briefly and leave it at that. The fact is you and Degolep are both slightly incorrect. You are slightly incorrect based on the fact that your pic you posted does not match your explanation although the area you have highlighted does have some significance and degolep's explanation does not match his/her picture they posted.

Crocodilerex is correct however and maybe he deserves to be removed I dont know and frankly don't give a rat's arse!. He is no friend or buddy, or follower of mine and quite frankly I dont care for his/her shitty attitude about the whole thing. (Quite frankly cant understand why people get ridiculous attitude with a thread moderator anyway. If you don't like what they are posting either ignore or stop following. people act like they have to protect the masses. I guess that's the problem with being a follower vs a leader.).

I think upon further review you may see it clearer. I will add this, if that's how you want to do you Fibonacci analysis then by all means who is anyone to judge. You do you and trade your plan after all its working and you of course know what you want to do in your own way. Do what you want with this information It doesn't matter to me, just thought I would clear things up for some of the people that come

to my thread concerned about how to measure the harmonic rhythm of the market. Thats all I'll say on the matter and will not entertain anyone else's concern about how someone does their analysis. Hope it helps you and your crew here at the Pivot trading thread. Keep up the awesome work you do and stay the leader you have become! Enjoy this time with your loved ones and As always.....

Enjoy, have fun, trade your plan, make a great day, do your own due diligence and may we all make bank! Game changing Bank!! The kind of Bank that makes you just Think and Grow!!

Thanks CNTrader for the way you responded to pivot trading as I'm also a follower of this thread. Must say that it is just a shame how some people react to a response from the thread starter. If that person is not happy how things is done then just leave and join some other thread that suits your style. But again that person is running around like a headless chicken.

Once again I salute you for the mature way you responded and green pips to you and your thread.

Here's a Template i made in Tradingview platform. The platform doesn't have anything like angulators, etc.

However it does have an equivalent of the ADR indi. I have it set for 20 day range. I look for swing failures on the outer pivots + ADR rejection.

Link to Template ---> <https://www.tradingview.com/chart/y4RPViGy/#>

Nice to see EC dropping. Would be good if NC and AC joined the party..
