

TVI – TWISTED

Fact #1: Losses – They **WILL** happen. No way around it.

Fact #2: Wins – If rules followed, this system will generate plenty of pips to cover the losses and provide good profit.

I am in no way taking credit for this system. This system is purely driven from Lou G's TVI-ALF system.

What I have done is taken the TVI system and modified it to suit my needs. If any of you have followed me before, you will know that I like to trade the M1 time frame. It is like a guilty pleasure.

In my endeavor in trying to master scalping the M1 chart, I have hit the wall over and over again. Because of this, I have made more of a conscious effort to trade the M5 time frame. I will still trade M1, however only when M5 seems to "choppy". When these time come, I will drop to M1 and more times then not, I will see some of clearest signals I have seen with the TVI-Twisted system.

With this being said, I will still primarily focus on M5 time frames, however, now that I have this system, I will not worry about taking M1 trades, when conditions feel right. Since I have started looking at this on a M1 chart, my trades have been fewer (which is

good for me), my trade totals on the winners have been consistently more profitable and my losses have been more disciplined.

I will be the first to say, that the my biggest hurdle that I still need to overcome is the exit. Depending how I am feeling, my TP exit, will either be a set TP (5-7 on M1), a moving SL (protecting the trade and being stopped out at +1 or BE) or riding the trade to its natural exit based on the charts. The last option is where I am striving to go.

I have only been trading this chart (or a close variation of this chart) for only a few weeks. But I can say that I have never had as much confidence in any system I have used. And I feel that when I get into a trade, I know that I have put myself in the best situation as possible to be in a winning trade.

Also with the losses from this system, I have become “comfortably numb” and not effected by it mentally, and therefore my revenge trading has seemed to cease.

INDICATORS:

I am posting my template and indicators that I use for this system. I will be the first to admit that some of these items seem redundant. I don't care. Change or take indi's off, as you feel comfortable with it. That is why I will keep the redundant indi's on my chart because I am comfortable with it.

I am posting the indicators on my chart with the setting from the Inputs tab (from top to bottom).

THV3 candle clock – default

AdaptiveLagurreFilter: 20,5,4

TVI_ Candles – Chart to be a bar chart – Default

Slope Direction Line – 30,3,0

AdaptivelaguerreFilter: 100,5,4

Window 1 Indicators:

TVI_2color 12,12,5

Slope Direction Line SW: 30,3,0

Window 2 Indicator:

BB_MACD_CCT 190,600,100,1.1

Please review the picture. You will see the entries and exits naturally. I will warn that you will miss good trade (one is displayed on the pic). However watching in real time, you never know, and I have learned to not guess what the market is going to do.

I will be posting any mods, and trades in my journal.

Have fun with it, and if you have any good ideas, please share!
