

Step by Step Instructions

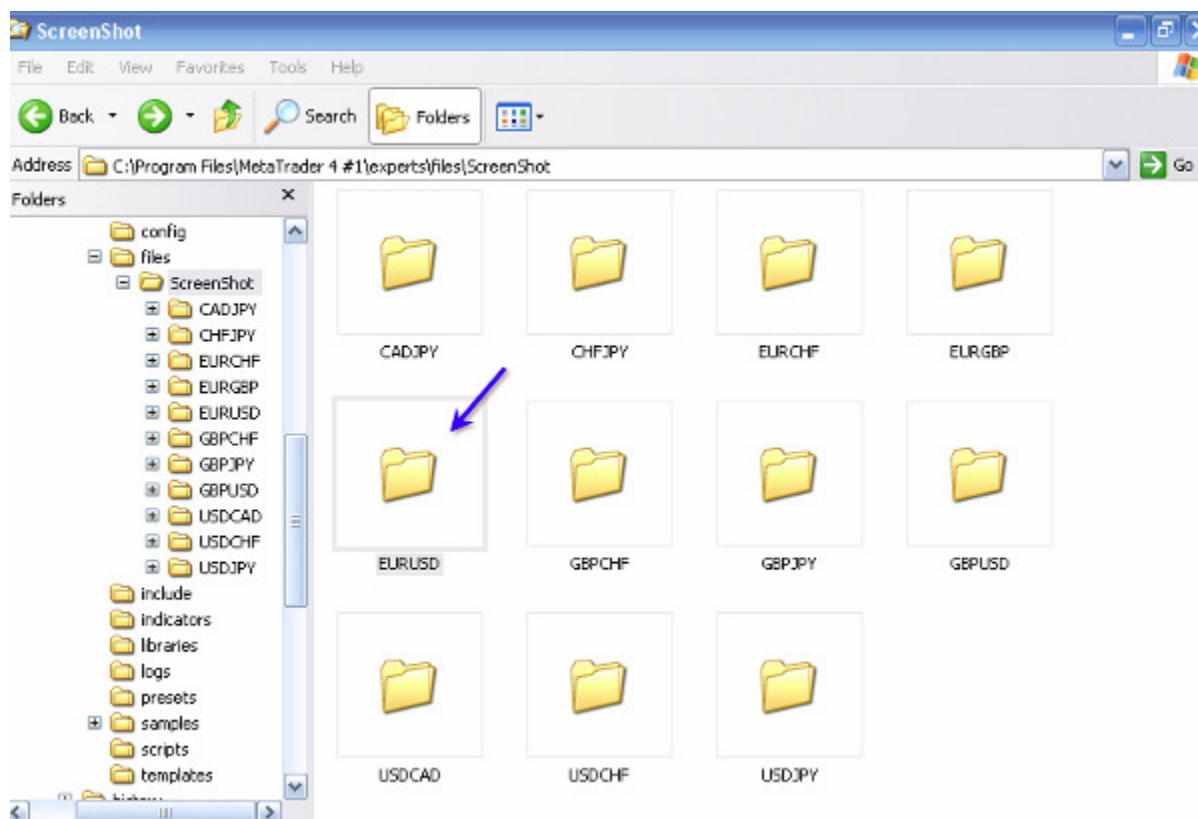

Cut and paste the "ScreenShots.ex4" file directly into your C:Program Files/MetaTrader4/experts /indicators/ folder

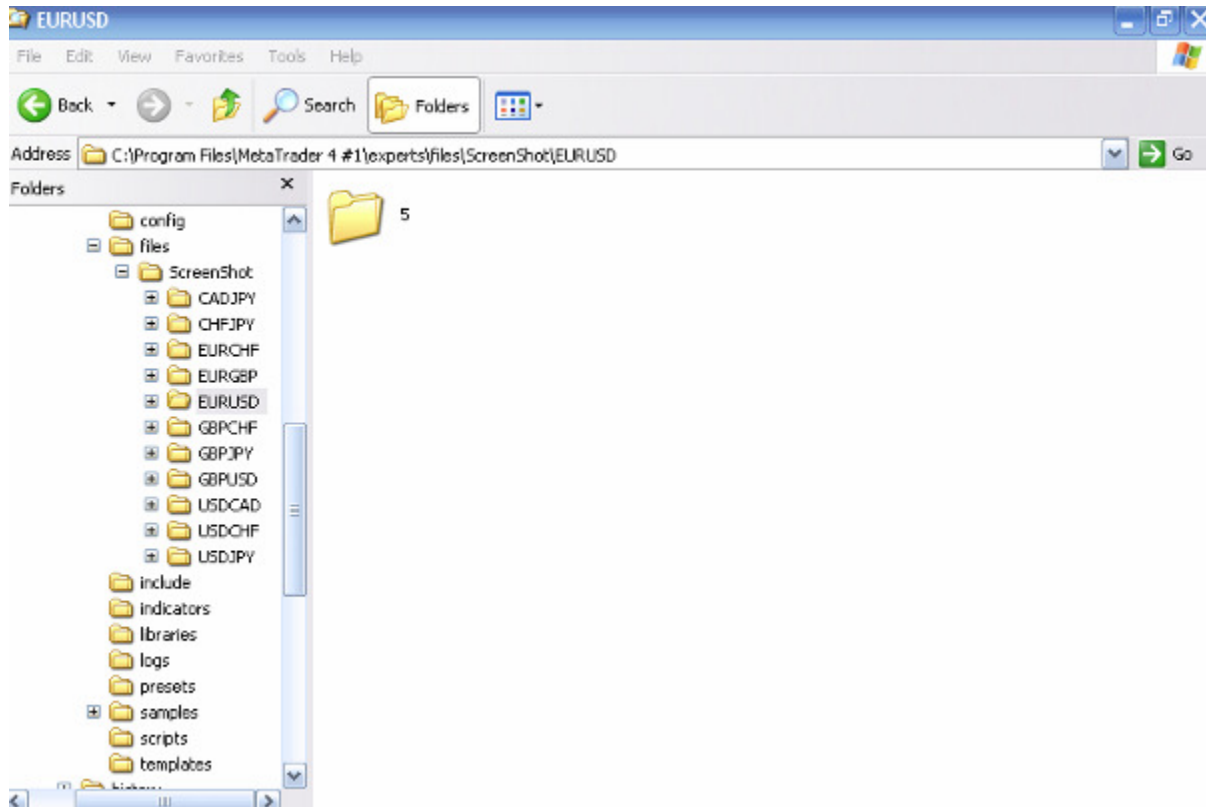

Click on your "Navigator" button on top of your MT4 platform. Open up your "Custom Indicators" folder within the Navigator window. You will see the "ScreenShots" custom indicator.

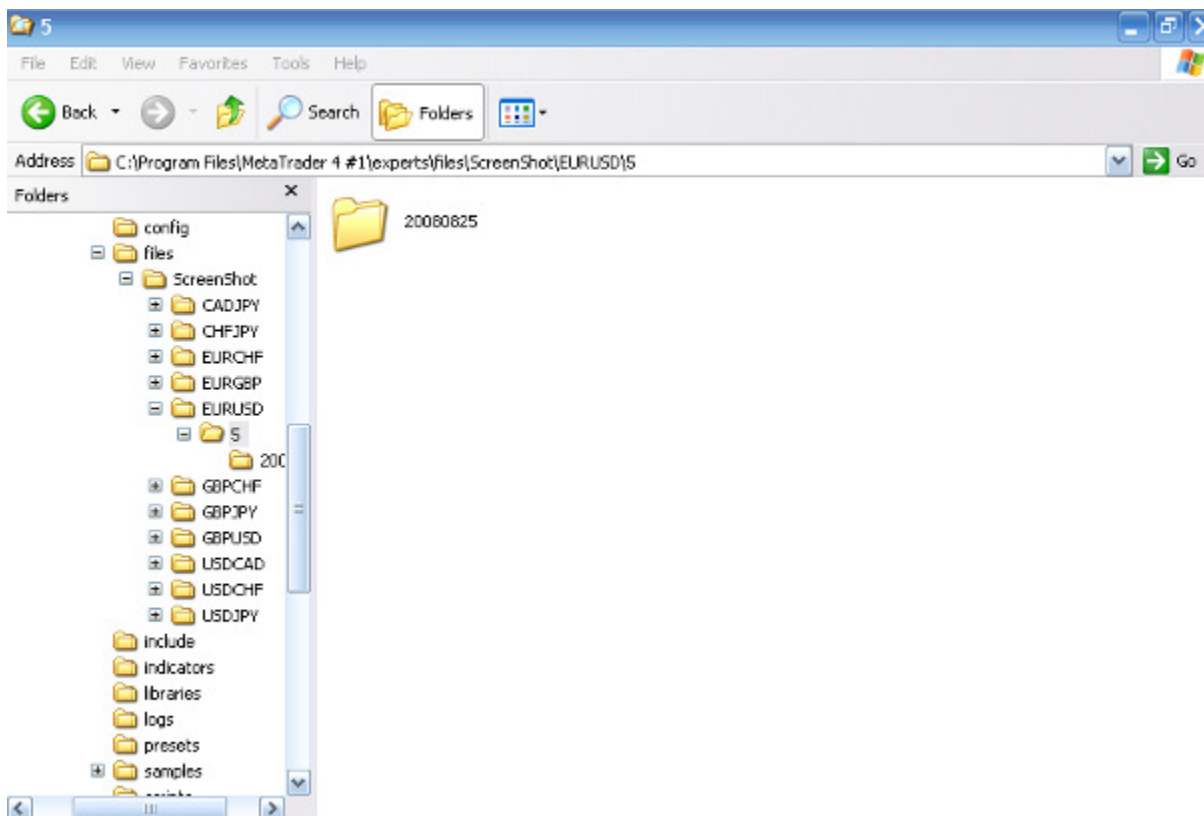

Choose a currency pair that you wish to apply the program to. Double click on the "ScreenShots" custom indicator. This will open the indicator window as shown above. Click on "ok" to apply the indicator to the chart. It will be invisible and working in the background.

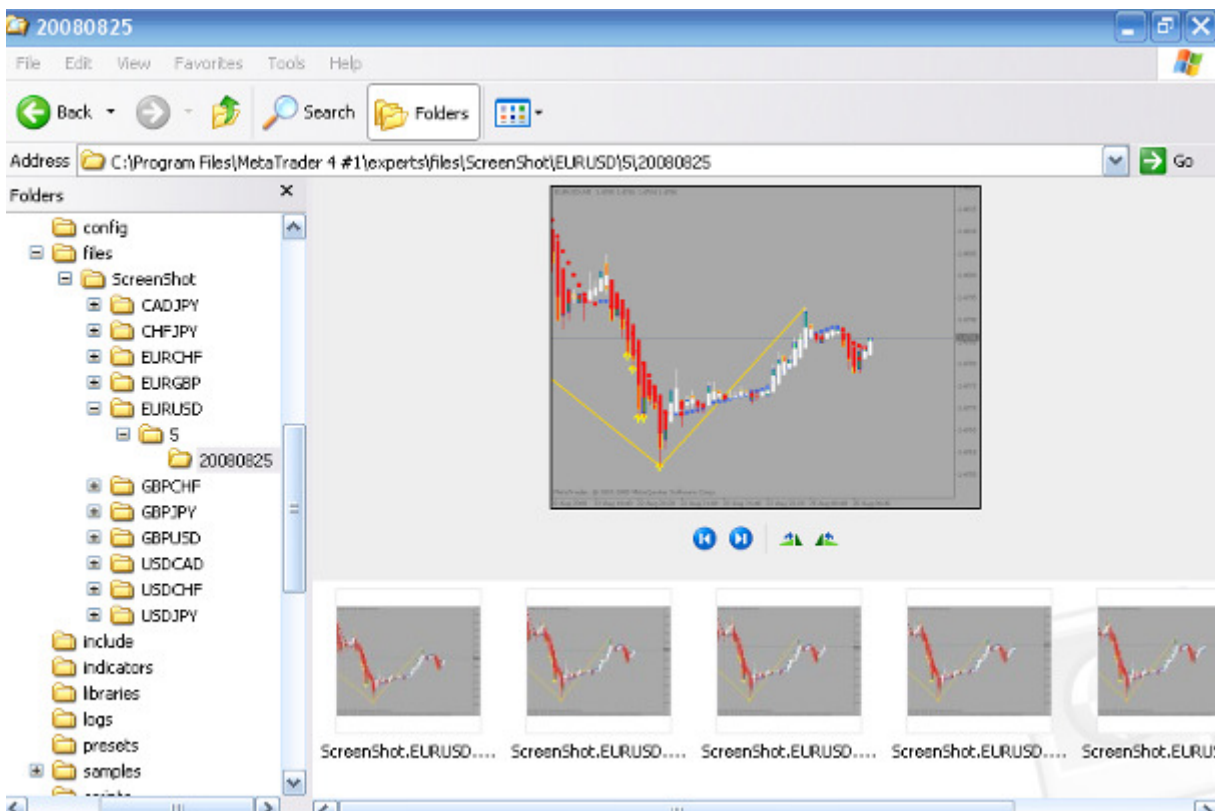

**To view the images being uploaded please go to: C:\Program Files\MetaTrader4\experts\Files
/ScreenShot/ folder. Now click on the currency you want to view.**

You will now see a yellow folder that corresponds to the charts timeframe that the "ScreenShots" program is loaded on. If you have more then one timeframe being monitored you will see additional folders to choose from.

After you click on the timeframe folder you will see the date that was automatically created that corresponds to the folder with images. In this example you will see 20080825. This means 08/25/2008.

Here you will see each image that has been uploaded by the "ScreenShots" program. You can scroll and look at each image frame by frame for analysis. In this example we have stored the 5 minute

data for the EUR/USD.

ENJOY!
