TIME & PRICE:-

- Price is useless until time is considered.
- There is no use of time without price levels
- By considering both the time and price at a point the result will be tremendous.
- For capturing High probability trades ,must look for *kill zones and news*.
- Killzones

USD pairs :For intraday trades consider the kill zones especially in London and New York one can able to capture high probable trades. Avoid the Asian kill zone- it will be mostly in consolidation.

For JPY/AUD/NZD pairs Asian kill zone is Considerable.

- News Focus on red folder news in that particular currency pair to capture high probable day in a week(forex factory.com).

Highly volatile news - CPI,FOMC,NFP & PPI .

NEWS :-

- **There is no bigger price movement bank holidays & without red folder news.**
- **During the Red folder (High impact) news days market show larger price movement**
- **weekly profile can be anticipated by using this Red folder news (High of the week and low of the week).**
